**Networks** ,2009 In the last 20 years interest in network phenomena has grown immensely among anthropologists psychologists political scientists economists and lawyers Empirical observation shows that network arrangements can be found in many branches of business This is often linked to rapid changes in today s markets and technologies but it is not the only reason Legal institutions have been at the centre of private law since the industrial revolution but today contracts and corporations cannot cope with the risks and opportunities posed by networks Legal practice needs solutions which go beyond the classical traditions of thinking in the dichotomy of contract and corporation This volume is the outcome of a conference held in Fribourg Switzerland which focused on the legal treatment of contractual networks in particular questions of network expectations the fragility of network institutions and the question of how law can minimise network specific risks towards third parties The contributors among them many of the world s leading scholars in this field include Roger Brownsword Simon Deakin Gunther Teubner Hugh Collins and Marc Amstutz The book will be of interest to scholars of contract corporate law and legal theory

**Networks** Mark Newman,2018-07-04 The study of networks including computer networks social networks and biological networks has attracted enormous interest in the last few years The rise of the Internet and the wide availability of inexpensive computers have made it possible to gather and analyze network data on an unprecedented scale and the development of new theoretical tools has allowed us to extract knowledge from networks of many different kinds The study of networks is broadly interdisciplinary and central developments have occurred in many fields including mathematics physics computer and information sciences biology and the social sciences This book brings together the most important breakthroughs in each of these fields and presents them in a coherent fashion highlighting the strong interconnections between work in different areas Topics covered include the measurement of networks methods for analyzing network data including methods developed in physics statistics and sociology fundamentals of graph theory computer algorithms mathematical models of networks including random graph models and generative models and theories of dynamical processes taking place on networks

**The Structure and Dynamics of Networks** Mark Newman,Albert-László Barabási,Duncan J. Watts,2011-10-23 From the Internet to networks of friendship disease transmission and even terrorism the concept and the reality of networks has come to pervade modern

society But what exactly is a network What different types of networks are there Why are they interesting and what can they tell us In recent years scientists from a range of fields including mathematics physics computer science sociology and biology have been pursuing these questions and building a new science of networks This book brings together for the first time a set of seminal articles representing research from across these disciplines It is an ideal sourcebook for the key research in this fast growing field The book is organized into four sections each preceded by an editors introduction summarizing its contents and general theme The first section sets the stage by discussing some of the historical antecedents of contemporary research in the area From there the book moves to the empirical side of the science of networks before turning to the foundational modeling ideas that have been the focus of much subsequent activity The book closes by taking the reader to the cutting edge of network science the relationship between network structure and system dynamics From network robustness to the spread of disease this section offers a potpourri of topics on this rapidly expanding frontier of the new science *Social Networks in the Long Eighteenth Century* Ileana Baird, 2014-11-19 In an attempt to better account for the impressive diversity of positions and relations that characterizes the eighteenth century world this collection proposes a new methodological frame one that is less hierarchical in approach and more focused instead on the nature of these interactions on their Addisonian usefulness declared goals and un intended results By shifting focus from a cultural historicist approach to sociability to the rhizomatic nature of eighteenth century associations this collection approaches them through new methodological lenses that include social network analysis assemblage and graph theory social media and digital humanities scholarship Imagining the eighteenth century world as a networked community rather than a competing one reflects a recent interest in novel forms of social interaction facilitated by new social media from Internet forums to various types of social networking sites and also signals the increasing involvement of academic communities in digital humanities projects that use new technologies to map out patterns of intellectual exchange As such the articles included in this collection demonstrate the benefits of applying interdisciplinary approaches to eighteenth century sociability and their role in shedding new light on the way public opinion was formed and ideas disseminated during pre modern times The issues addressed by our contributors are of paramount importance for understanding the eighteenth century culture of sociability They address among other things clubbing practices and social networking strategies political cultural gender based in the eighteenth century world the role of clubs and other associations in improving knowledge and behaviors conflicting views on publicity literary and political alliances and their importance for an emerging celebrity culture the role of cross national networks in launching pan European and transatlantic trends Romantic modes of sociability as well as the contribution of voluntary associations clubs literary salons communities of readers etc to the formation of the public sphere This collection demonstrates how relevant social networking strategies were to the context of the eighteenth century world and how similar they are to the congeries of new practices shaping the digital public sphere of today *Complex Networks XV* Federico Botta, Mariana Macedo, Hugo

Barbosa,Ronaldo Menezes,2024-04-13 The International Conference on Complex Networks CompleNet brings together researchers and practitioners from diverse disciplines working on areas related to complex networks CompleNet has been an active conference since 2009 Over the past two decades we have witnessed an exponential increase in the number of publications and research centres dedicated to this field of Complex Networks aka Network Science From biological systems to computer science from technical to informational networks and from economic to social systems complex networks are becoming pervasive for dozens of applications It is the interdisciplinary nature of complex networks that CompleNet aims to capture and celebrate The CompleNet conference is one of the most cherished events by scientists in our field Maybe it is because of its motivating format consisting of plenary sessions no parallel sessions or perhaps the reason is that it finds the perfect balance between young and senior participation a balance in the demographics of the presenters or perhaps it is just the quality of the work presented

*An Introduction to Undergraduate Research in Computational and Mathematical Biology* Hannah Callender Highlander,Alex Capaldi,Carrie Diaz Eaton,2020-02-17 Speaking directly to the growing importance of research experience in undergraduate mathematics programs this volume offers suggestions for undergraduate appropriate research projects in mathematical and computational biology for students and their faculty mentors The aim of each chapter is twofold for faculty to alleviate the challenges of identifying accessible topics and advising students through the research process for students to provide sufficient background additional references and context to excite students in these areas and to enable them to successfully undertake these problems in their research Some of the topics discussed include Oscillatory behaviors present in real world applications from seasonal outbreaks of childhood diseases to action potentials in neurons Simulating bacterial growth competition and resistance with agent based models and laboratory experiments Network structure and the dynamics of biological systems Using neural networks to identify bird species from birdsong samples Modeling fluid flow induced by the motion of pulmonary cilia Aimed at undergraduate mathematics faculty and advanced undergraduate students this unique guide will be a valuable resource for generating fruitful research collaborations between students and faculty

**Legal Protection of Genetic Resources and Traditional Knowledge from a Social Network Perspective** Elnur Karimov,2025-12-09 This book explores the urgent and evolving legal challenges surrounding the use of genetic resources and traditional knowledge

TK particularly those held by Indigenous Peoples and local communities International frameworks like the Nagoya Protocol and the 2024 WIPO Treaty aim to regulate benefit sharing but legal enforcement remains weak This book argues that traditional legal approaches both international and national alone are no longer sufficient and proposes a network focused enforcement and compensation mechanism that uses social network analysis to examine the flow of genetic materials and TK through national and global supply chains This approach is applied to 30 real world biopiracy case studies across diverse regions including Asia Latin America and Africa to identify legal blind spots and power asymmetries The book explains how predicting central nodes within supply chains where biopiracy and misappropriation are most likely to occur can lead to better enforcement and compensation outcomes It then concludes with policy recommendations and suggestions to design more robust protection mechanisms for genetic resources and the associated TK This book will interest scholars of intellectual property and biotechnology law as well as scholars of indigenous studies Policymakers indigenous activists and social scientists who are interested in the broader applications of social network analysis will also find this of note
