Networks,2009 In the last 20 years interest in network phenomena has grown immensely among anthropologists psychologists political scientists economists and lawyers Empirical observation shows that network arrangements can be found in many branches of business This is often linked to rapid changes in today s markets and technologies but it is not the only reason Legal institutions have been at the centre of private law since the industrial revolution but today contracts and corporations cannot cope with the risks and opportunities posed by networks Legal practice needs solutions which go beyond the classical traditions of thinking in the dichotomy of contract and corporation This volume is the outcome of a conference held in Fribourg Switzerland which focused on the legal treatment of contractual networks in particular questions of network expectations the fragility of network institutions and the question of how law can minimise network specific risks towards third parties The contributors among them many of the world s leading scholars in this field include Roger Brownsword Simon Deakin Gunther Teubner Hugh Collins and Marc Amstutz The book will be of interest to scholars of contract corporate law and legal theory

Catanzaro,2012-10-25 From ecosystems to Facebook from the Internet to the global financial market some of the most important and familiar natural systems and social phenomena are based on a networked structure It is impossible to understand the spread of an epidemic a computer virus large scale blackouts or massive extinctions without taking into account the network structure that underlies all these phenomena In this Very Short Introduction Guido Caldarelli and Michele Catanzaro discuss the nature and variety of networks using everyday examples from society technology nature and history to explain and understand the science of network theory They show the ubiquitous role of networks how networks self organize why the rich get richer and how networks can spontaneously collapse They conclude by highlighting how the findings of complex network theory have very wide and important applications in genetics ecology communications economics and sociology **ABOUT THE SERIES** The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable **The Structure and Dynamics of Networks** Mark Newman,Albert-László Barabási,Duncan J.

Watts,2011-10-23 From the Internet to networks of friendship disease transmission and even terrorism the concept and the reality of networks has come to pervade modern society But what exactly is a network What different types of networks are there Why are they interesting and what can they tell us In recent years scientists from a range of fields including mathematics physics computer science sociology and biology have been pursuing these questions and building a new science of networks This book brings together for the first time a set of seminal articles representing research from across these disciplines It is an ideal sourcebook for the key research in this fast growing field The book is organized into four sections each preceded by an editors introduction summarizing its contents and general theme The first section sets the stage by discussing some of the historical antecedents of contemporary research in the area From there the book moves to the empirical side of the science of networks before turning to the foundational modeling ideas that have been the focus of much subsequent activity The book closes by taking the reader to the cutting edge of network science the relationship between network structure and system dynamics From network robustness to the spread of disease this section offers a potpourri of topics on this rapidly expanding frontier of the new science *Introduction to Computer Networking* Thomas G.

Robertazzi,2017-02-24 This book gives a broad look at both fundamental networking technology and new areas that support it and use it It is a concise introduction to the most prominent recent technological topics in computer networking Topics include network technology such as wired and wireless networks enabling technologies such as data centers software

Methods for Multilevel

Analysis and Visualisation of Geographical Networks Céline Rozenblat,Guy Melancon,2013-06-03 This leading edge study focuses on the latest techniques in analysing and representing the complex multi layered data now available to geographers studying urban zones and their populations The volume tracks the successful results of the SPANGE Project which was set up in 2005 to standardize and share the syncretic multinational mapping techniques already developed by geographers and computer scientists SPANGE sought new and responsive ways of visualising urban geographical and social data that reflected the fine grained detail of the inputs It allowed for visual representation of the large and complex networks and flows which are such an integral feature of the dynamism of urban geography SPANGE developed through the visual analytics loop in which geographers collaborated with computer scientists by feeding data into the design of visualisations that in turn spawned the urge to incorporate more varied data into the visualisation This volume covers all the relevant aspects from conceptual principles to the tools of network analysis and the actual results flowing from their deployment Detailed case studies set out in this volume include spatial multi level analyses of flows in airports and sea ports as well as the fascinating scientific networks in European cities The volume shows how the primary concern of geography the interaction of society with physical space has been revivified by the complexities of new cartographical and statistical methodologies which allow for highly detailed mapping and far more powerful computer analysis of spatial relationships
