Neuro Adaptive Process Control A Practical Approach:

Neuro-Adaptive Process Control Peter M. Mills, Albert Y. Zomaya, Moses O. Tadé, 1996-01-30 Using a series of rigorous authentic examples the authors demonstrate several simple yet practical techniques for utilizing adaptive neural networks to produce more efficient process control Their in depth description of implementation issues offers a wealth of pragmatic wisdom

Nonlinear Model-based Process Control Rashid M. Ansari, Moses O. Tade, 2012-12-06 The series Advances in Industrial Control aims to report and encourage technology transfer in control engineering The rapid development of control technology has an impact on all areas of the control discipline New theory new controllers actuators sensors new industrial processes computer methods new applications new philosophies new challenges Much of this development work resides in industrial reports feasibility study papers and the reports of advanced collaborative projects The series offers an opportunity for researchers to present an extended exposition of such new work in all aspects of industrial control for wider and rapid dissemination The last decade has seen considerable interest in reviving the fortunes of non linear control In contrast to the approaches of the 60S 70S and 80S a very pragmatic agenda for non linear control is being pursued using the model based predictive control paradigm This text by R Ansari and M Tade gives an excellent synthesis of this new direction Two strengths emphasized by the text are i four applications found in refinery processes are used to give the text a firm practical continuity ii a non linear model based control architecture is used to give the method a coherent theoretical framework

Scheduling in Parallel Computing Systems Shaharuddin Salleh,Albert Y. Zomaya,2012-12-06 Scheduling in Parallel Computing Systems Fuzzy and Annealing Techniques advocates the viability of using fuzzy and annealing methods in solving scheduling problems for parallel computing systems The book proposes new techniques for both static and dynamic scheduling using emerging paradigms that are inspired by natural phenomena such as fuzzy logic mean field annealing and simulated annealing Systems that are designed using such techniques are often referred to in the literature as intelligent because of their capability to adapt to sudden changes in their environments Moreover most of these changes cannot be anticipated in advance or included in the original design of the system Scheduling in Parallel Computing Systems Fuzzy and Annealing Techniques provides results that prove such approaches can become viable alternatives to orthodox solutions to the scheduling problem which are mostly based on heuristics Although heuristics are robust and reliable when solving certain instances of the scheduling problem they do not perform well when one needs to obtain solutions to general forms of the scheduling problem On the other hand techniques inspired by natural phenomena have been successfully applied for solving a wide range of combinatorial optimization problems e g traveling salesman graph partitioning The success of these methods motivated their use in this book to solve scheduling problems that are known to be formidable combinatorial problems Scheduling in Parallel Computing Systems Fuzzy and Annealing Techniques is an excellent reference and may be used for advanced courses on the topic
