Neurons In Action 2 Tutorials And Simulations Using Neuron:

Neurons in Action John W. Moore, Ann E. Stuart, 2007 *Neurons in Action 2* is the second version of a unique CD ROM based learning tool that combines hyperlinked text with NEURON simulations of laboratory experiments in neurophysiology. Version 2 features nine new tutorials introducing new channel types, single channel simulations, and a redesigned interface. *Neurons in Action*'s moving graphs provide insight into nerve function that is simply not possible with conventional static text and figure presentations. Students discover how changing parameters such as neuronal geometry, ion concentrations, ion channel densities, and degree of myelination affects the generation of action potentials, synaptic potentials, and the spread or propagation of voltages within a neuron. For instructors, minimovies of NEURON simulations are provided for use in lectures.

Molecular and Cellular Physiology of Neurons Gordon L. Fain, 2015-01-05 *Gordon Fain's Molecular and Cellular Physiology of Neurons* Second Edition is intended for anyone who seeks to understand nerve cell function: undergraduate and graduate students in neuroscience, students of bioengineering and cognitive science, and practicing neuroscientists who want to deepen their knowledge of recent discoveries. **The Annotated Hodgkin and Huxley** Indira M. Ferster, 2022-01-11 Historical background Paper 1 Paper 2 Paper 3 Paper 4 Paper 5 **The History of Neuroscience in Autobiography** Larry R. Squire, 1996 Publisher supplied data. This book is the second volume of autobiographical essays by distinguished senior neuroscientists; it is part of the first collection of neuroscience writing that is primarily autobiographical. As neuroscience is a young discipline, the contributors to this volume are truly pioneers of scientific research on the brain and spinal cord. This collection of fascinating essays should inform and inspire students and working scientists alike. The general reader interested in science may also find the essays absorbing as they are essentially human stories about commitment and the pursuit of knowledge. The contributors included in this volume are Lloyd M. Beidler, Arvid Carlsson, Donald R. Griffin, Roger Guillemin, Ray Guillery, Masao Ito, Martin G. Larrabee, Jerome Lettvin, Paul D. MacLean, Brenda Milner, Karl H. Pribram, Eugene Roberts, and Gunther Stent. **Computation in Neurons and Neural Systems** Frank H. Eeckman, 2012-12-06

Computation in Neurons and Neural Systems contains the collected papers of the 1993 Conference on Computation and Neural Systems, which was held between July 31 and August 7 in Washington, DC. These papers represent a cross section of the state of the art research work in the field of computational neuroscience and include coverage of analysis and modeling work as well as results of new biological experimentation. **Neuroscience** Dale Purves, 2008 Created primarily for medical and premedical students, *Neuroscience* emphasizes the structure of the nervous system, the correlation of structure and function, and the structure-function relationships particularly pertinent to the practice of medicine. *Society for*

Beeman,2012-12-06 This is the second edition of a step by step tutorial for professionals researchers and students working in the area of neuroscience in general and computational neuroscience in particular It can also be used as an interactive self study guide to understanding biological neuronal and network structure for those working in the area of artificial neural networks and the cognitive sciences The tutorials are based upon the GENESIS neural simulation system which is now being used for teaching and research in at least 26 countries The following chapters consist of a combination of edited contributions from researchers in computational neuroscience and current users of the system as well as several chapters that we have written ourselves This book and the tutorial simulations on which it is based grew out of a simulation laboratory accompanying the annual Methods in Computational Neuroscience course taught at the Marine Biological Laboratory in Woods Hole MA from 1988 to 1992 Since that time the tutorials have been further developed and refined while being used in courses taught at Caltech and several other institutions including the Crete course in Computational Neuroscience For this second edition we have made many revisions and additions based on comments suggestions and corrections from members of the GENESIS Users Group BABEL and from students and teachers who have used this book
