Trajectory and Orbit Plotter Instruction Manual Richard Henry Frick,W. I. Rumer,E. H. Sharkey,1963
A graphical method for obtaining the solution of a large class of trajectory and orbit problems is described By this method it
is possible given a set of initial conditions to construct the resulting trajectory or orbit and determine the velocity path angle
ground range altitude and time of flight corresponding to any point of the path In addition it is also possible to take into
account the effects of earth rotation on the ballistic path and to determine the latitude and longitude of points on the earth
trace including the impact position The equipment required for applying this method includes a trajectory chart an earth
rotation chart and a protractor copies of which are included This equipment has been designed so that a user with a
knowledge of simple arithmetic and a few basic geometrical constructions as well as the ability to follow directions can
obtain rapid solutions to trajectory and orbit problems with an accuracy of the order of 0 5 per cent in the results The method
should have considerable application to the class of problems not requiring the extreme precision of the high speed digital
computer Such problems would include preliminary design missile performance determinations feasibility studies and
trajectory and orbit prediction problems Author
