An Introduction to Analytic Functions John Sheridan Mac Nerney, 2020-05-30 When first published in 1959 this book was the basis of a two semester course in complex analysis for upper undergraduate and graduate students J S Mac Nerney was a proponent of the Socratic or do it yourself method of learning mathematics in which students are encouraged to engage in mathematical problem solving including theorems at every level which are often regarded as too difficult for students to prove for themselves Accordingly Mac Nerney provides no proofs What he does instead is to compose and arrange the investigation in his own unique style so that a contextual proof is always available to the persistent student who enjoys a challenge The central idea is to empower students by allowing them to discover and rely on their own mathematical abilities This text may be used in a variety of settings including the usual classroom or seminar but with the teacher acting mainly as a moderator while the students present their discoveries a small group setting in which the students present their discoveries to each other and independent study The Editors William E Kaufman who was Mac Nerney s last PhD student and Ryan C Schwiebert have composed the original typed Work into LaTeX they have updated the notation terminology and some of the prose for modern usage but the organization of content has been strictly preserved
