**Foundations of Intelligent Systems** Ning Zhong, Zbigniew W. Ras, Shusaku Tsumoto, Einoshin Suzuki, 2003-10-22 This volume contains the papers selected for presentation at the 14th International Symposium on Methodologies for Intelligent Systems ISMIS 2003 held in Maebashi City Japan 28-31 October 2003. The symposium was organized by the Maebashi Institute of Technology in co-operation with the Japanese Society for Artificial Intelligence. It was sponsored by the Maebashi Institute of Technology, Maebashi Convention Bureau, Maebashi City Government, Gunma Prefecture Government, US AFOSR, AOARD, the Web Intelligence Consortium, Japan Gunma Information Service Industry Association, and Ryomo Systems Co. Ltd. ISMIS is a conference series that was started in 1986 in Knoxville Tennessee. Since then it has been held in Charlotte North Carolina, Knoxville Tennessee, Turin Italy, Trondheim Norway, Warsaw Poland, Zakopane Poland, and Lyon France. The program committee selected the following major areas for ISMIS 2003: active media, human computer interaction, autonomic and evolutionary computation, intelligent agent technology, intelligent information retrieval, intelligent information systems, knowledge representation and integration, knowledge discovery and data mining, logic for artificial intelligence, soft computing, and Web intelligence.

**Database Design for Smarties** Robert J. Muller, 1999-03-08 Craft the Right Design Using UML. Whether building a relational, object relational, or object oriented database, database developers are increasingly relying on an object oriented design approach as the best way to meet user needs and performance criteria. This book teaches you how to use the Unified Modeling Language, the official standard of the Object Management Group, to develop and implement the best possible design for your database. Inside the author leads you step by step through the design process from requirements analysis to schema generation. You will learn to express stakeholder needs in UML use cases and actor diagrams, to translate UML entities into database components, and to transform the resulting design into relational, object relational, and object oriented schemas for all major DBMS products. Features: Teaches you everything you need to know to design, build, and test databases using an OO model. Shows you how to use UML, the accepted standard for database design, according to OO principles. Explains how to transform your design into a conceptual schema for relational, object relational, and object oriented DBMSs. Offers practical examples of design for Oracle, SQL Server, Sybase, Informix, Object Design, POET, and other database management systems. Focuses heavily on re-using design patterns for maximum productivity and teaches you how to certify completed designs for re-use.

Reasoning in Event-Based Distributed Systems Sven Helmer, Alexandra Poulovassilis, Fatos Xhafa, 2011-03-29 With the rapid expansion of the Internet over the last 20 years, event-based distributed systems are playing an increasingly important role in a broad range of application domains, including enterprise management, environmental monitoring, information dissemination, finance, pervasive systems, autonomic computing, collaborative working, and learning, and geo-spatial systems. Many different architectures, languages, and technologies are being used for implementing event-based distributed systems, and much of the development has been undertaken independently by different communities. However, a common factor is an ever-increasing complexity. Users and developers expect that such systems are

able not only to handle large volumes of simple events but also to detect complex patterns of events that may be spatially distributed and may span significant periods of time Intelligent and logic based approaches provide sound foundations for addressing many of the research challenges faced and this book covers a broad range of recent advances contributed by leading experts in the field It presents a comprehensive view of reasoning in event based distributed systems bringing together reviews of the state of the art new research contributions and an extensive set of references It will serve as a valuable resource for students faculty and researchers as well as industry practitioners responsible for new systems development
