Spreadsheet Problem Solving and Programming for Engineers and Scientists David E. Clough, Steven C. Chapra, 2023-10-19 *Spreadsheet Problem Solving and Programming for Engineers and Scientists* provides a comprehensive resource essential to a full understanding of modern spreadsheet skills needed for engineering and scientific computations. Beginning with the basics of spreadsheets and programming, this book builds on the authors' decades of experience teaching spreadsheets and programming to both university students and professional engineers and scientists. Following on from this, it covers engineering economics, key numerical methods and applied statistics. Finally, this book details the Visual Basic for Applications (VBA) programming system that accompanies Excel. With each chapter including examples and a set of exercises, this book is an ideal companion for all engineering courses and also for self-study. Based on the latest version of Excel (Microsoft Excel for Microsoft 365), it is also compatible with earlier versions of Excel, dating back to Version 2013. Including numerous case studies, this book will be of interest to students and professionals working in all areas of engineering and science.

Data Smart John W. Foreman, 2013-10-31 *Data Science* gets thrown around in the press like it's magic. Major retailers are predicting everything from when their customers are pregnant to when they want a new pair of Chuck Taylors. It's a brave new world where seemingly meaningless data can be transformed into valuable insight to drive smart business decisions. But how does one exactly do data science? Do you have to hire one of these priests of the dark arts, the data scientist, to extract this gold from your data? Nope. Data science is little more than using straight-forward steps to process raw data into actionable insight. And in *Data Smart*, author and data scientist John Foreman will show you how that's done within the familiar environment of a spreadsheet. Why a spreadsheet? It's comfortable. You get to look at the data every step of the way, building confidence as you learn the tricks of the trade. Plus, spreadsheets are a vendor-neutral place to learn data science without the hype. But don't let the Excel sheets fool you. This is a book for those serious about learning the analytic techniques, the math and the magic behind big data. Each chapter will cover a different technique in a spreadsheet, so you can follow along. Mathematical optimization, including non-linear programming and genetic algorithms. Clustering via k-means, spherical k-means, and graph modularity. Data mining in graphs, such as outlier detection, supervised AI

through logistic regression ensemble models and bag of words models. Forecasting seasonal adjustments and prediction interval through Monte Carlo simulation. Moving from spreadsheets into the R programming language. You get your hands dirty as you work alongside John through each technique. But never fear, the topics are readily applicable and the author laces humor throughout. You'll even learn what a dead squirrel has to do with optimization modeling, which you no doubt are dying to know.

Working with Excel Priscilla Chaffee-Stengel, Donald N. Stengel, 2012-12-31

Managers and analysts routinely collect and examine key performance measures to better understand their operations and make good decisions. Being able to render the complexity of operations data into a coherent account of significant events requires an understanding of how to work well in the electronic environment with raw data. Although some statistical and financial techniques for analyzing data are sophisticated and require specialized expertise, there are methods that are understandable and applicable by anyone with basic algebra skills and the support of a spreadsheet package. While specialized software packages may be used in a particular business setting, Microsoft Excel is routinely available on computer desktops. Managers who have been in the field any length of time may not be sufficiently familiar with the capabilities of Excel to make optimal use of its functionalities. Prior to undertaking a program to pursue executive training, managers who are refreshed with basic algebra skills and the capabilities of Excel will be prepared to develop a richer understanding from their more advanced work. The primary foci of this text are:

- To refresh fundamental mathematical operations that broadly support statistical and financial equations and formulas
- To introduce work with equations and formulas in Excel spreadsheets
- To expand statistical and financial analysis with the programmed Excel functions readily available through the Insert Function toolbar button and the more advanced Data Analysis Toolkit
- To facilitate graphic representations of data
- And finally, To prepare data mounted in differing file formats.

This text is a companion to a series of books that addresses the analysis of sample data, time series data, managerial economics and forecasting techniques. Together, these books will equip the manager and the student with a solid understanding of applied data analysis and prepare them to apply the methods themselves.

Maths for Economics Geoff Renshaw, 2021-03-29

Maths for Economics provides a comprehensive and solid foundation in core mathematical principles and methods used in economics, beginning with revisiting basic skills in arithmetic, algebra, equation solving, and slowly building to more advanced topics. Suitable for those with a range of prior school level experience or more generally for those who feel they need to go back to the very basics, students can learn with confidence. Drawing on his extensive experience of teaching in the area, the author appreciates that maths can be a daunting topic for many. As such, the text is fully supports the reader by using a combination of engaging learning features including

summary sections examples to show how theory is used in practice and progress exercises which encourage independent study Each chapter ends with a conclusion check list to allow students to reflect on topics as they master them Digital formats and resources The fifth edition is available for students and institutions to purchase in a variety of formats and is supported by online resources The e book offers a mobile experience and convenient access along with functionality tools navigation features and links that offer extra learning support www.oxfordtextbooks.co.uk/ebooks Online resources supporting the book include For Students Ask the author forum Excel tutorial Maple tutorial Further exercises Answers to further questions Expanded solutions to progress exercises For Lecturers Test exercises Graphs from the book Answers to test exercises *Knowledge is Power in Four Dimensions: Models to Forecast Future Paradigm* Bahman Zohuri, Farhang Mossavar Rahmani, Farahnaz Behgounia, 2022-07-14 Knowledge is Power in Four Dimensions Models to Forecast Future Paradigms Forecasting Energy for Tomorrow's World with Mathematical Modeling and Python Programming Driven Artificial Intelligence delivers knowledge on key infrastructure topics in both AI technology and energy Sections lay the groundwork for tomorrow's computing functionality starting with how to build a Business Resilience System BRS data warehousing data management and fuzzy logic Subsequent chapters dive into the impact of energy on economic development and the environment and mathematical modeling including energy forecasting and engineering statistics Energy examples are included for application and learning opportunities A final section deliver the most advanced content on artificial intelligence with the integration of machine learning and deep learning as a tool to forecast and make energy predictions The reference covers many introductory programming tools such as Python Scikit TensorFlow and Kera Helps users gain fundamental knowledge in technology infrastructure including AI machine learning and fuzzy logic Compartmentalizes data knowledge into near term and long term forecasting models with examples involving both renewable and non renewable energy outcomes Advances climate resiliency and helps readers build a business resiliency system for assets *Introduction to Financial Technology* Roy S. Freedman, 2006-04-24 The financial technology environment is a dynamic high pressured fast paced world in which developing fast and efficient buy and sell order processing systems and order executing clearing and settling systems is of primary importance The orders involved come from an ever changing network of people traders brokers market makers and technology To prepare people to succeed in this environment seasoned financial technology veteran Roy Freedman presents both the technology and the finance side in this comprehensive overview of this dynamic area He covers the broad range of topics involved in this industry including auction theory databases networked computer clusters back office operations derivative securities regulation compliance bootstrap statistics optimization and risk management in order to present an in depth treatment of the current state of the art in financial technology Each chapter concludes with a list of exercises a list of references a list of websites for further information and case studies With amazing clarity Freedman explains both the technology side and the finance side of financial technology Accessible to both finance professionals
