## Navy Geotechnical Manual:

**Foundation Engineering Handbook** Hsai-Yang Fang,2013-06-29 More than ten years have passed since the first edition was published During that period there have been a substantial number of changes in geotechnical engineering especially in the applications of foundation engineering As the world population increases more land is needed and many soil deposits previously deemed unsuitable for residential housing or other construction projects are now being used Such areas include problematic soil regions mining subsidence areas and sanitary landfills To overcome the problems associated with these natural or man made soil deposits new and improved methods of analysis design and implementation are needed in foundation construction As society develops and living standards rise tall buildings transportation facilities and industrial complexes are increasingly being built Because of the heavy design loads and the complicated environments the traditional design concepts construction materials methods and equipment also need improvement Further recent energy and material shortages have caused additional burdens on the engineering profession and brought about the need to seek alternative or cost saving methods for foundation design and construction

*Correlations of Soil and Rock Properties in Geotechnical Engineering* Jay Ameratunga,Nagaratnam Sivakugan,Braja M. Das,2015-12-11 This book presents a one stop reference to the empirical correlations used extensively in geotechnical engineering Empirical correlations play a key role in geotechnical engineering designs and analysis Laboratory and in situ testing of soils can add significant cost to a civil engineering project By using appropriate empirical correlations it is possible to derive many design parameters thus limiting our reliance on these soil tests The authors have decades of experience in geotechnical engineering as professional engineers or researchers The objective of this book is to present a critical evaluation of a wide range of empirical correlations reported in the literature along with typical values of soil parameters in the light of their experience and knowledge This book will be a one stop shop for the practising professionals geotechnical researchers and academics looking for specific correlations for estimating certain geotechnical parameters The empirical correlations in the forms of equations and charts and typical values are collated from extensive literature review and from the authors database
