Moisture and Buildings Arianna Brambilla, Alberto Sangiorgio, 2021-05-28 One in three homes on average suffer from excessive dampness and mould proliferation with significant health and economic impacts The combination of new construction methodologies stricter airtightness requirements and the changing social and cultural context that influences the way we live inside buildings has created unprecedented challenges for the built environment In modifying indoor and outdoor environments and the building envelopes that serve as a filter between the two we are changing the physical parameters of the ways in which buildings behave and respond to climatic stimuli Understanding and predicting the way in which buildings and moisture may interact should be an important step in the design process aiming to minimise possible negative long term consequences

Understanding and predicting the way in which buildings and moisture may interact is today more than ever essential yet difficult as the experience of the past has lost its applicability. Moisture related issues never have a simple solution since they involve multiple factors including design, construction, maintenance, materials, climate and occupation pattern. Thus while the topic is attracting growing attention among researchers, designers and practitioners, the pace with which actual change is occurring is still too slow. *Moisture and Buildings* provides a critical overview of current research, knowledge and policy frameworks and presents a comprehensive analysis of the implications of moisture and the importance of accounting for it during the design process. It responds to the urgent need for a systematic organization of the existing knowledge to identify research gaps and provide directions for future developments. The ultimate goal is to increase awareness of the multifaceted implications of hygrothermal phenomena and promote integrated design processes that lead to healthier and more durable constructions. Presents advanced knowledge on hygrothermal processes and their interaction with buildings. Integrates the three key areas of moisture transport and its impact on buildings including durability, human health and comfort. Considers the most useful computational tools for assessing moisture and building interactions. Includes a section on the main European, American and Australian building codes. Explains the risks of mold growth to human health including growth models to assessment methods.

Law, Policy and Climate Change Darrel De Sousa, 2022-09-29 Focusing on systemic risks caused by climate change, this book examines how these risks can be effectively regulated to ensure resilience and avoid catastrophe. Systemic risks are risks that threaten the systems upon which society depends, including ecosystems, social systems, financial systems and systems of infrastructure. Such risks are typically characterised by inherent complexity, profound uncertainty and overwhelming ambiguity. In combination, these features pose significant regulatory challenges for policy and law makers. Examining how different types of systemic risks caused by climate change are being regulated in four different jurisdictions: the EU, the UK, the US and Australia, this book identifies deficiencies associated with regulating systemic risks using a traditional approach based on a linear relationship between risk and regulation, which is widely used to regulate risk. The book advances a regulatory approach that is instead founded on the concept of risk governance. This involves a structured yet flexible, holistic, interdisciplinary and inclusive basis for responding to systemic risks, and it is this, the book argues, a more effective basis for regulating systemic risks given their uncertainty, complexity and ambiguity. This book will appeal to academics, policy and law makers and practitioners working at the intersection of law and policy in the areas of regulation, risk management and climate change.

Energy Performance in the Australian Built Environment Priyadarsini Rajagopalan, Mary Myla Andamon, Trivess Moore, 2018-07-11 This book examines energy efficiency in the Australian built environment and presents current developments with a particular focus on the temperate setting of Victoria state. It is divided into four main parts: discussing policies, climate and carbon footprint, and presenting case studies on the energy performance and indoor environmental quality of various building types.
