Industrial Radiography and Non-destructive Testing, 1997 **Nondestructive Testing and Evaluation of Fiber-Reinforced Composite**

Structures Shuncong Zhong, Walter Nsengiyumva, 2022-04-01 This book presents a detailed description of the most common nondestructive testing NDT techniques used for the testing and evaluation fiber reinforced composite structures during manufacturing and or in service stages In order to facilitate the understanding and the utility of the different NDT techniques presented the book first provides some information regarding the defects and material degradation mechanisms observed in fiber reinforced composite structures as well as their general description and most probable causes It is written based on the extensive scientific research and engineering backgrounds of the authors in the NDT and structural health monitoring SHM of structural systems from various areas including electrical mechanical materials civil and biomedical engineering Pursuing a rigorous approach the book establishes a fundamental framework for the NDT of fiber reinforced composite structures while emphasizing on the importance of technique s spatial resolution integrated systems analysis and the significance of the influence stemming from the applicability of the NDT and the physical parameters of the test structures in the selection and utilization of adequate NDT techniques The book is intended for students who are interested in the NDT of fiber reinforced composite structures researchers investigating the applicability of different NDT techniques to the inspections of structural systems and NDT researchers and engineers working on the optimization of NDT systems for specific applications involving the use of fiber reinforced composite structures **Non-destructive Testing for Inspection of Bridges and Buildings**

Armin Mehrabi, Saman Dolati, Pranit Malla, Saman Farhangdoust, Ziad Azzi, 2025-04-27

Unchecked damages and the potential for the failure of civil structures threaten public safety and can result in a significant economic impact. As such, buildings, bridges, and other structures should be inspected at short intervals to prevent the potential spread of damages and catastrophic failures. To address this, in addition to conventional visual inspection, a variety of non-destructive testing (NDT) methods for damage detection have been developed and practiced over the recent decades. Most often, however, the inspectors have difficulty selecting the most applicable, practical, and cost-effective technique for their purpose. This book brings in one place the available NDT methods, provides a brief technical overview for each, and discusses the applicability of the methods to specific types of structures. Additionally, the book describes the expected damages, defects, and the sources in structures that use steel, concrete, fibre-reinforced polymers (FRP), and timber, providing guidance for the selection of the most applicable NDT method.

British Journal of Non-destructive Testing , 1990 **Nondestructive Testing of Deep Foundations** Bernhardt H. Hertlein, Bernard Hertlein, Allen Davis, 2006-08-25 Nondestructive Testing involves the use of methods such as wave propagation electromagnetism electrical conductivity and thermal conductivity to test structural integrity and thereby allow nondestructive assessment of structures and the possibility of structural failures before they occur Nondestructive Testing of Deep Foundations covers different techniques designed to provide information about the integrity and quality of the material that makes up a deep foundation Nondestructive Testing methods are used at all stages of a structure s life from new construction quality control to residual lifetime prediction and even during the monitoring of demolition In addition Nondestructive Testing is being increasingly specified in deep foundation projects though often without a good understanding of its limitations and with the result that methods are often misused In order to be able to specify an appropriate method or to recognize an inappropriate specification it is necessary for the engineer specifier and or contractor to understand the capabilities and limitations of each of the methods currently in use Nondestructive Testing of Deep Foundations Describes the most commonly used deep foundation construction techniques including typical use of material Provides a brief history of the development of commercially available nondestructive methods Summarises each method s capabilities and limitations Acts as a one stop reference drawing together resources only previously available in conference
