Electric Vehicle Propulsion Drives and Charging Systems Kundan Kumar, Ambrish Devanshu, Sanjeet K.

Dwivedi,2024-06-18 This book covers the introduction theory development and applications of hybrid and electric vehicles and their charging infrastructures It also discusses the real applications of power converters and electric drives to give the readers a flavour of how to design propulsion drives and fast charging systems for electric vehicles It further covers important topics such as static and dynamic wireless charging systems battery management and battery swapping systems for electric vehicles This book Presents comprehensively different types of electric vehicles and their powertrain architecture Highlights modern optimization techniques such as genetic algorithms simulated annealing particle swarm optimization and ant colony optimization Discusses different charging methods such as wired and wireless for a variety of batteries including lead acid lithium ion and vanadium redox Covers grid to vehicle vehicle to grid and vehicle to vehicle bidirectional power flow analysis Showcases power 2X technologies such as power to ammonia power to chemicals power to fuel power to gas and power to hydrogen The text is primarily written for senior undergraduate and graduate students as well as academic researchers in the fields of electrical engineering electronics and communications engineering *Distributed Energy Storage Systems for Digital Power Systems* Sivaraman Palanisamy,Sharmeela Chenniappan,2024-11-15 Distributed Energy Storage Systems for Digital Power Systems offers detailed information of all aspects of distributed energy resources and storage systems and their integration into modern digital power systems supporting higher power systems operational flexibility towards 100% renewable energy integration Covering fundamentals analysis design and operation and supported by examples and case studies the book also examines many new advances in terms of distributed energy storage systems for DER integration dynamically varying loads of EV charging stations power quality enhancements and ancillary services This is a valuable resource for researchers scientists and graduate students in energy storage renewable energy power systems and engineering as well as engineers R D and other industry personnel working with renewable energy systems energy storage demand response and microgrids Provides an easy tool for understanding distributed energy storage systems for digital power systems Covers fundamentals design analysis application and operation of distributed storage systems Includes examples and practical case studies to enhance and reinforce learning Fast Charging and Resilient Transportation Infrastructures in Smart Cities Hossam A. Gabbar,2022-08-03 This book provides readers with expert knowledge on the design of fast charging infrastructures and their planning in smart cities and communities to support autonomous transportation The recent development of fast charging infrastructures using hybrid energy systems is examined along with aspects of connected and autonomous vehicles CAV and their integration within transportation networks and city infrastructures The book looks at challenges and opportunities for autonomous transportation including connected and autonomous vehicles shuttles and their technology development and deployment within smart communities Intelligent control strategies architectures and systems are also covered along with intelligent data centers that ensure effective transportation networks during normal and emergency situations Planning strategies are presented to demonstrate the

resilient transportation infrastructures and optimized performance is discussed in view of performance indicators and requirements specifications as well as regulations and standards

Intelligent and Sustainable Power and Energy Systems
M. Premkumar, Pasumarthi Usha, Sujit Kumar, Manikanta Gopiseti, 2025-07-23

Intelligent and Sustainable Power and Energy Systems delves into the critical advancements shaping the future of global energy. This compilation presents cutting edge research and innovative solutions addressing the urgent need to transition towards environmentally responsible and technologically sophisticated energy infrastructures. Explore the integration of artificial intelligence machine learning and advanced control systems in optimising energy generation distribution and consumption. Discover novel approaches to renewable energy integration smart grid technologies and energy storage solutions all geared towards enhancing efficiency and minimising environmental impact. From theoretical frameworks to practical implementations this work offers a comprehensive overview of the latest developments providing essential insights for researchers engineers and policymakers striving to build a resilient and sustainable energy future. This book is a vital resource for navigating the complex challenges and opportunities in the evolving landscape of power and energy systems.
