Navigating Network Complexity Next Generation Virtualization:

Navigating Network Complexity Russ White,Jeff Tantsura,2015-11-13 Design your networks to successfully manage their growing complexity Network professionals have often been told that today s modern control planes would simplify their networks The opposite has happened Technologies like SDN and NFV although immensely valuable are exacerbating complexity instead of solving it Navigating Network Complexity is the first comprehensive guide to managing this complexity in both deployment and day to day operations Russ White and Jeff Tantsura introduce modern complexity theory from the standpoint of the working network engineer helping you apply it to the practical problems you face every day Avoiding complex mathematical models they show how to characterize network complexity so you can understand it and control it The authors examine specific techniques and technologies associated with network control planes including SDNs fast reroute segment routing service chaining and cloud computing They reveal how each of these affects network design and complexity and help you anticipate causes of failure in highly complex systems **Navigating Network Complexity** Russ White,Jeff Tantsura,2016 **Advances in Computer Science for Engineering and Education II** Zhengbing Hu,Sergey Petoukhov,Ivan Dychka,Matthew He,2019-03-28 This book gathers high quality peer reviewed research papers presented at the Second International Conference on Computer Science Engineering and Education Applications ICCSEEA2019 held in Kiev Ukraine on 26 27 January 2019 and jointly organized by the National Technical University of Ukraine Igor Sikorsky Kyiv Polytechnic Institute and the International Research Association of Modern Education and Computer Science The papers discuss state of the art topics and advances in computer science neural networks pattern recognition engineering techniques genetic coding systems deep learning and its medical applications and knowledge representation and its applications in education Given its scope the book offers an excellent resource for researchers engineers management practitioners and graduate and undergraduate students interested in computer science and its applications in engineering and education

Computer Networking Problems and Solutions Russ White,Ethan Banks,2017-12-06 Master Modern Networking by Understanding and Solving Real Problems Computer Networking Problems and Solutions offers a new approach to understanding networking that not only illuminates current systems but prepares readers for whatever comes next Its problem solving approach reveals why modern computer networks and protocols are designed as they are by explaining the problems any protocol or system must overcome considering common solutions and showing how those solutions have been implemented in new and mature protocols Part I considers data transport the data plane Part II covers protocols used to discover and use topology and reachability information the control plane Part III considers several common network designs and architectures including data center fabrics MPLS cores and modern Software Defined Wide Area Networks SD WAN Principles that underlie technologies such as Software Defined Networks SDNs are considered throughout as solutions to problems faced by all networking technologies This guide is ideal for beginning network engineers students of computer

networking and experienced engineers seeking a deeper understanding of the technologies they use every day Whatever your background this book will help you quickly recognize problems and solutions that constantly recur and apply this knowledge to new technologies and environments Coverage Includes Data and networking transport Lower and higher level transports and interlayer discovery Packet switching Quality of Service QoS Virtualized networks and services Network topology discovery Unicast loop free routing Reacting to topology changes Distance vector control planes link state and path vector control Control plane policies and centralization Failure domains Securing networks and transport Network design patterns Redundancy and resiliency Troubleshooting Network disaggregation Automating network management Cloud computing Networking the Internet of Things IoT Emerging trends and technologies   5G Networks Atahar Khan,Satya Priyo Dhar,Ramakrishnan Shanmugasundaram,Joe Chemparathy,2024-08-12 This book provides comprehensive coverage of building an end to end view on how to architect design and orchestrate a 5G capable network that will integrate with 5G RAN IP transport datacenters Telco Cloud and 5G packet networks It contains real world examples with challenges and success strategies for deploying 5G Transport with closed loop automation It also focuses on aspects like scale performance latency security and manageability while building 5G transport for some of the world s largest 5G networks as well as migration approaches from 4G to 5G transport and core network 5G is an emerging technology that mobile service providers MNO MVNO across the world are embracing They are willing to invest in enabling their infrastructure for 5G and explore new business opportunities with their enterprise mobile customers As per the Gartner survey the majority of communication service provider CSP revenue will come from 5G 5G is going to open the door to new applications such as wireless virtual reality low latency machine to machine communication smart city infrastructure autonomous vehicles IoT deployment artificial intelligence based applications industrial automation and so much more   Next-Generation Enterprise Security and Governance Mohiuddin Ahmed,Nour Moustafa,Abu Barkat,Paul Haskell-Dowland,2022-04-19 The Internet is making our daily lives as digital as possible and this new era is called the Internet of Everything IoE The key force behind the rapid growth of the Internet is the technological advancement of enterprises The digital world we live in is facilitated by these enterprises advances and business intelligence These enterprises need to deal with gazillions of bytes of data and in today s age of General Data Protection Regulation enterprises are required to ensure privacy and security of large scale data collections However the increased connectivity and devices used to facilitate IoE are continually creating more room for cybercriminals to find vulnerabilities in enterprise systems and flaws in their corporate governance Ensuring cybersecurity and corporate governance for enterprises should not be an afterthought or present a huge challenge In recent times the complex diversity of cyber attacks has been skyrocketing and zero day attacks such as ransomware botnet and telecommunication attacks are happening more frequently than before New hacking strategies would easily bypass existing enterprise security and governance platforms using advanced persistent threats For example in 2020 the Toll Group firm was

exploited by a new crypto attack family for violating its data privacy where an advanced ransomware technique was launched to exploit the corporation and request a huge figure of monetary ransom Even after applying rational governance hygiene cybersecurity configuration and software updates are often overlooked when they are most needed to fight cyber crime and ensure data privacy Therefore the threat landscape in the context of enterprises has become wider and far more challenging There is a clear need for collaborative work throughout the entire value chain of this network In this context this book addresses the cybersecurity and cooperate governance challenges associated with enterprises which will provide a bigger picture of the concepts intelligent techniques practices and open research directions in this area This book serves as a single source of reference for acquiring the knowledge on the technology process and people involved in next generation privacy and security   *Mission-critical Network Planning* Matthew Liotine,2003 Whether a terrorist attack fiber cut security breach natural disaster or traffic overload today s networks must be designed to withstand adverse conditions and provide continuous service This comprehensive leading edge book reveals the techniques and strategies to help you keep enterprise data and voice networks in service under critical circumstances You learn numerous ways to minimize single points of failure through redundancy and backups and discover how to select the right networking technologies to improve survivability and performance   Handbook of Human Factors in Air Transportation Systems Steven James Landry,2017-11-22 One of the primary applications of human factors engineering is in the aviation domain and the importance of human factors has never been greater as U S and European authorities seek to modernize the air transportation system through the introduction of advanced automation This handbook provides regulators practitioners researchers and educators a comprehensive resource for understanding and applying human factors to air transportation   Virtual Networks Otto Carlos M. B. Duarte,Guy Pujolle,2013-08-02 The first chapter of this title concerns virtualization techniques that allow sharing computational resources basically slicing a real computational environment into virtual computational environments that are isolated from one another The Xen and OpenFlow virtualization platforms are then presented in Chapter 2 and a performance analysis of both is provided This chapter also defines the primitives that the network virtualization infrastructure must provide for allowing the piloting plane to manage virtual network elements Following this interfaces for system management of the two platforms are proposed in Chapter 3 To control and manage virtual network elements five primitives that the network virtualization infrastructure must provide are defined instantiate delete migrate monitor and set The book then moves on to survey existing control algorithms for virtual networking It also describes the main challenges for packet forwarding using Xen as a virtualization tool and describes in more detail a proposal for local control of virtual networks Within each physical node this proposal guarantees the service level acquired by each virtual network even in the presence of misbehaving virtual networks   Network Virtualization in Next Generation Cellular Networks Georgia Tseliou,2019 The complexity of operation and management of emerging cellular networks significantly increases as they evolve to correspond to increasing QoS needs

data rates and diversity of offered services Thus critical challenges appear regarding their performance At the same time network sustainability pushes toward the utilization of haring Radio Access Network RAN infrastructure between Mobile Network Operators MNOs This requires advanced network management techniques which have to be developed based on characteristics of these networks and traffic demands Therefore it is necessary to provide solutions enabling the creation of logically isolated network partitions over shared physical network infrastructure Multiple heterogeneous virtual networks should simultaneously coexist and support resource aggregation so as to appear as a single resource to serve different traffic types on demand Hence in this thesis we study RAN virtualization and slicing solutions destined to tackle these challenges In the first part we present our approach to map virtual network elements onto radio resources of the substrate physical network in a dense multi tier LTE A scenario owned by a MNO We propose a virtualization solution at BS level where baseband modules of distributed BSs interconnected via logical point to point X2 interface cooperate to reallocate radio resources on a traffic need basis Our proposal enhances system performance by achieving 53% throughput gain compared with benchmark schemes without substantial signaling overhead In the second part of the thesis we concentrate on facilitating resource provisioning between multiple Virtual MNOs MVNOs by integrating the capacity broker in the 3GPP network management architecture with minimum set of enhancements A MNO owns the network and provides RAN access on demand to several MVNOs Furthermore we propose an algorithm for on demand resource allocation considering two types of traffic Our proposal achieves 50% more admitted requests without Service Level Agreement SLA violation compared with benchmark schemes In the third part we devise and study a solution for BS agnostic network slicing leveraging BS virtualization in a multi tenant scenario This scenario is composed of different traffic types e g tight latency requirements and high data rate demands along with BSs characterized by different access and transport capabilities i e Remote Radio Heads RRHs Small Cells SCs and future 5G NodeBs gNBs with various functional splits having ideal and non ideal transport network Our solution achieves 67% average spectrum usage gain and 16 6% Baseband Unit processing load reduction compared with baseline scenarios Finally we conclude the thesis by providing insightful research challenges for future works
