11. *What is the primary purpose of the following statement?*

Reproductive success is often measured by the number of offspring produced, but this metric can be misleading. For example, a female bird that lays many eggs but only a few hatch may have a lower reproductive success than a female that lays fewer eggs but all hatch. Additionally, some species have different reproductive strategies, such as brood parasitism or cooperative breeding, which may not be captured by a simple count of offspring. Therefore, it is important to consider the context and specific biology of the species when evaluating reproductive success.
