Seamster,Richard E. Redding,George L. Kaempff,1997 Due to the requirements of automatic system design and new needs for the training of complex tasks Cognitive Task Analysis CTA has been used with increasing frequency in recent years by the airline industry and air traffic control community Its power is reflected in the literature on professional training and systems design where CTA is often cited as one of the most promising new technologies especially for the complex cognitive tasks now confronting those working in aviation The objective of this book is to bridge the gap between research and practice to make what we know about CTA available to practitioners in the field The book focuses on cognitive psychology and artificial intelligence analyses of aviation tasks It is designed to help readers identify and solve specific design and training problems in the flight deck air traffic control and operations contexts Distilling experience and guidelines from the best aviation cognitive analyses in accessible form it is the first comprehensive volume on CTA and is written for practitioners of cognitive analysis in aviation It provides an overview of analyses to date methods of data collection and recommendations for designing and conducting CTA for use in instructional design systems development and evaluation The first part of the book provides the principles and foundations of CTA describing traditional approaches to task analysis and ways that cognitive analyses can be integrated with the analysis and development processes The next part details how to select the appropriate method or methods determine job tasks that can be trained for automatic performance extract knowledge structures analyse mental models and identify the decision making and problem solving strategies associated with experienced job performance The authors also describe when to use and how to design and conduct a cognitive task analysis how to use CTA along with traditional task analysis and ISD and how to use CTA in training program development and systems design as well as in personnel selection and evaluation The current demand for cognitive analyses makes this a timely volume for those in aviation and more generally the industrial development and training communities Readers will find this a thorough presentation of cognitive analyses in aviation and a highly usable guide in the design implementation and interpretation of CTA The book will be useful to instructional developers aviation equipment and systems designers researchers government regulatory personnel human resource managers instructors pilots air traffic controllers and operations staff *Adult*

Organisational Psychology in Australia and New Zealand Michael P. O'Driscoll, Paul J. Taylor, Thomas Kalliath, 2003 Organisational psychology also known as industrial and organisational I O psychology is a dynamic and pervasive field within the general discipline of psychology Organisational psychology focuses on people attitudes values and behaviours in the domain of work especially within organisational settings such as private businesses government organisations the military and so on The field covers a very wide range of issues ranging from the selection of individual people for specific jobs through to the management of large scale organisational change and development Organisational psychologists therefore contribute to a broad array of processes and functions within organisations While many textbooks relating to organisational psychology are available almost all of these have been developed in either the United States or the United Kingdom and hence refer to conditions applying predominantly in those countries Consequently although much of the theory and research described in these texts is of a general nature there is some lack of direct practical relevance to Australian and New Zealand conditions Furthermore the considerable amount of research conducted within these two countries is frequently overlooked in other international texts The purpose of this textbook is therefore to provide a coverage of essential topics in the field of organisational psychology as far as possible to introduce research illustrations from Australia and New Zealand as well as international research in each topic area and incorporate Australian and New Zealand examples and case studies to illustrate the local relevance of theory and research Each chapter contains a practice illustration and a case study relating to either Australia or New Zealand Questions for discussion at the end of each chapter will focus on issues that are directly relevant to students in these two countries
