Physiotherapy for Respiratory and Cardiac Problems Jennifer A. Pryor, Ammani S Prasad, 2008-03-06 Now in its fourth edition Physiotherapy for Respiratory and Cardiac Problems continues to be an essential textbook and reference source for undergraduate and postgraduate students and for the clinician working with patients with cardiac and respiratory problems. Its strengths lie in integrating the evidence with clinical practice and in covering the whole patient lifespan: infants, children, adolescents and adults. New chapters on critical care, surgery and psychological aspects of care, expanded evidence for clinical practice, case studies, multi-contributed chapters written by internationally recognised experts, extensively revised text with new illustrations and photographs, comprehensive reference lists which direct the reader to further sources of information. Part of the Physiotherapy Essentials series, core textbooks for both students and lecturers. Online image bank now available. [Care of Adults with Chronic Childhood Conditions](#) Alice A Kuo, Mariecel Pilapil, David E. DeLaet, Cynthia Peacock, Niraj Sharma, 2024-07-18 This book addresses the unique healthcare needs of adults with chronic childhood illnesses. It presents a model of primary and secondary prevention for emerging adulthood: primary prevention in which all young adults are screened for high risk behaviors and health needs, and secondary prevention in which young adults with chronic childhood conditions are optimized through coordinated care connections to community resources and social family support. Now in its revised and expanded second edition, this book is organized in seven parts. Part I provides a detailed overview of the health care transition from pediatrics to adult medicine from both a policy and practice perspective. New topics in this section include telemedicine as a tool to optimize transition care and systems of care models of care that include practical steps on how to get transition transfer done or care for these patients in the appropriate setting. In Part II, the concept of emerging adulthood as a developmental period is explored and strategies for providing improved comprehensive care for this age group are discussed. A section on addressing health maintenance has been added to this edition. Part III reviews specific chronic childhood conditions such as attention deficit hyperactivity disorder, autism, cystic fibrosis and diabetes mellitus and offers clinical cases and summary reports that can be used as a quick guide to each condition. Several new conditions have been added to this section including metabolic issues, conditions, eating disorders, transgender medicine and childhood endocrine conditions. Section IV is a completely new section that focuses on hospital medicine. Chapters within this section include pre op clearance, maintaining safety, neurodiversity considerations, ER issues and triaging emergencies, contact with PCP, adult issues not addressed pediatric issues, often overlooked inpatient transition policies and procedures. Med Peds Transition, palliative care, hospice and unique inpatient cases. In Part V, additional clinical considerations that are not necessarily condition specific but are highly relevant to the care of young adults with chronic childhood conditions are examined. Part VI describes the socio-legal issues involved in caring for this population. Finally, part

of the book is dedicated to the use of physiotherapy in the management of these conditions. The book is intended for healthcare professionals working with adults with chronic childhood conditions, including physicians, nurses, physical therapists, and other healthcare providers. It is also suitable for students and trainees in these fields. The book is organized into seven parts, each covering a specific aspect of the care of adults with chronic childhood conditions.
