*Clean Energy Urban Design* Dennis Frenchman,P. Christopher Zegras,2015-01-30 **Clean Energy Urban Design** The Energy Proforma in Practice and Policy offers a new way of understanding urban energy consumption in fast growing China by asking a simple question How does the design of neighborhoods affect energy consumption Four years of research including interviews of 4 500 families and statistical modeling of their energy usage led MIT researchers Dennis Frenchman and Chris Zegras to conclude that people living in better designed neighborhoods will consume less energy in their daily patterns of life Frenchman and Zegras take their findings a step further by making the results of their work accessible to the public through the online Energy Proforma <http://energyproforma.mit.edu> a tool that allows designers policymakers and the rest of us to rapidly assess the comprehensive energy performance of a neighborhood while it is being designed or after it is built The Proforma provides the basis for design and policy recommendations included in the book as well as illustrative neighborhood designs developed using the Proforma in the test city of Jinan China **Clean Energy Urban Design** The Energy Proforma in Practice and Policy is a visionary yet highly practical approach to developing more sustainable low carbon cities one neighborhood at a time

**How Do Behavior Science Interventions to Reduce Environmental Impacts Work in The Real World?** Christian Andreas Klöckner,Jens Rørvik, Giuseppe Carrus , Michael Niederkofler,2025-11-27 Behavioral sciences encompassing environmental psychology behavioral economics social anthropology and sociology have significantly advanced our understanding of how individual social economic and structural factors contribute to pro environmental actions These insights have facilitated the development of intervention strategies that have yielded impressive results under controlled conditions However the primary challenge lies in scaling these interventions from small scale or laboratory settings to real world applications involving millions determining how these can be adapted and managed by non scientists across diverse populations The objective of this research topic is to compile a series of studies and papers that investigate the real world application of behavioral science interventions This involves analyzing the transition from well funded pilot programs to large scale implementations identifying the necessary conditions and considerations that influence the effectiveness of these interventions when deployed widely By understanding these dynamics the research seeks to transform academic concepts into practical tools that enable individuals to modify their behaviors such as reducing energy consumption thereby addressing significant environmental challenges We welcome contributions that Evaluate which interventions are most effective for specific demographic groups Analyze the role of cultural factors in the success of environmental strategies

Investigate the influence of communication channels and spokespersons in intervention adoption Share insights from collaborative efforts between scientists and stakeholders such as NGOs or local governments Discuss inclusivity in behavioral campaigns especially concerning marginalized groups Offer solutions for reaching and influencing reluctant populations Develop tools to simplify the application of behavioral science by non experts Contribute to effective dialogue about behavioral science that resonates with the general public Bridge the gap between theoretical research and practical application needs Appropriate Technology ,1996 **Future Urban Energy System for Buildings** Xingxing Zhang,Pei Huang,Yongjun Sun,2023-05-13 This book investigates three main characteristics of future urban energy system for buildings including flexibility resilience and optimization It explores the energy flexibility by considering renewable energy integration with buildings sector coupling and energy trading in the local energy market Energy resilience is addressed from aspects of future climate change pandemic crisis and operational uncertainties Approaches for system design dynamic pricing and advanced control are discussed for the optimization of urban energy system Knowledge from this book contributes to the effective means in future urban energy paradigm to closely integrate multiple energy systems i e distribution mobility production and storage with different energy carriers i e heat electricity in an optimal manner for energy use It would facilitate the envision of next generation urban energy systems towards sustainability resilience and prosperity This book targets at a broad readership with specific experience and knowledge in energy system transport built environment and urban planning As such it will appeal to researchers graduate students engineers consultants urban scientists investors and policymakers with interests in energy flexibility building city resilience and climate neutrality
