

HEARTIFICIAL INTELLIGENCE

*Embracing Our Humanity to
Maximize Machines*

A robotic hand, composed of metallic fingers and a articulated wrist, is shown holding a small, pinkish-red heart. The hand is positioned in the center of the frame, with the heart resting in the palm. The background is a bright yellow with a pattern of radiating lines that converge towards the center where the hand is located, creating a sunburst effect.

Online Heartificial Intelligence Embracing Humanity Maximize:

Heartificial Intelligence John Havens, 2016-02-02 As we program machines to be more like humans how will they know what we value if we don't know ourselves The notion of robots gaining consciousness is beginning to become a reality but the future of human happiness is dependent on our ability to teach machines what we value the most today Featuring pragmatic solutions drawing on economics emerging technologies and positive psychology Heartificial Intelligence provides a road map to help readers embrace the present and better define their future Using fictional vignettes to help readers relate to larger concepts this book paints a vivid portrait of how our lives might look in either a dystopia of robot dominance or a utopia where we use technology to enhance our natural abilities and evolve into a long lived super intelligent and caring species

The Humanized Internet Akram Alfawakheeri, Monique J. Morrow, 2025-11-19 Enterprising the Internet has been a process over the past years and while this book does not set judgement it does call for a moment of pause and reflection on the impact of these technologies to individuals There are constant key themes throughout this book such as the notion of identity and identity sets e sovereignty and privacy but most importantly the function of an Internet that is inclusive and not controlled by a few organizations for their own profitability This is The Humanized Internet These tenets may sound libertarian but in fact we are talking about the core principles that guide the development and perhaps the return of the Internet to the people especially those who are underserved Do no evil should not just be a company motto but the driving principle behind the development of any technologies that do impact us as individual consumers of these technologies and corresponding products Indeed there is a polarity between an Internet that is used for mass empowerment and one that can be used for mass destruction Privacy security and the management of your digital footprint should be done by you With the progression of human and machine interaction due to advances in biotech and the brain computer interface the cloud and virtual mixed reality we need to understand the impacts of these technologies to identity overall Do we require a new definition of identity What is e sovereignty and its application moving forward if we posit that the institutions that exist today may no longer be relevant in their current structure We have all read about the abuses that occur when your data falls into the hands of other entities intentionally or not The Humanized Internet is therefore a call to action your action

Computers, People, and Thought Malachy Eaton, 2020-09-22 In this book the author discusses synergies between computers and thought related to the field of Artificial Intelligence between people and thought leading to questions of consciousness and our existence as humans and between computers and people leading to the recent remarkable advances in the field of humanoid robots He then looks toward the implications of intelligent conscious humanoid robots with superior intellects able to operate in our human environments After presenting the basic engineering components and supporting logic of computer systems and giving an overview of the contributions of pioneering scientists in the domains of computing logic and robotics in the core of the book the author examines the meaning of thought and intelligence in the context of

intelligence is the most discussed and arguably the most powerful technology in the world today The very rapid development of the technology and its power to change the world and perhaps even ourselves calls for a serious and systematic thinking about its ethical and social implications as well as how its development should be directed The present book offers a new perspective on how such a direction should take place based on insights obtained from the age old tradition of Buddhist teaching The book argues that any kind of ethical guidelines for AI and robotics must combine two kinds of excellence together namely the technical and the ethical The machine needs to aspire toward the status of ethical perfection whose idea was laid out in detail by the Buddha more than two millennia ago It is this standard of ethical perfection called machine enlightenment that gives us a view toward how an effective ethical guideline should be made This ideal is characterized by the realization that all things are interdependent and by the commitment to alleviate all beings from suffering in other words by two of the quintessential Buddhist values The book thus contributes to a concern for a norm for ethical guidelines for AI that is both practical and cross cultural *Artificial Intelligence Safety and Security* Roman V.
