Computer Hardware Pavel Bartoš, 1991. When writing this book we tried to create a material that would serve as a comprehensive guide to the world of computer hardware. Our goal was to offer readers not only theoretical knowledge but also practical skills that can be used in real situations. We believe that this textbook will be useful not only for high school students but also for the general public who are interested in technologies and their applications. When creating the content we were based on many years of experience in education and practice in the field of information technology. We tried to cover a wide range of topics from basic components of a personal computer to more complex issues such as overclocking microprocessors or configuring RAID systems. Each topic is supplemented with practical examples and exercises that help to better understand the given issue.

ECCWS 2023 22nd European Conference on Cyber Warfare and Security Antonios Andreatos, Christos Douligeris, 2023-06-22. *Build a Large Language Model (From Scratch)* Sebastian Raschka, 2024-10-29. Learn how to create, train, and tweak large language models (LLMs) by building one from the ground up. In *Build a Large Language Model from Scratch*, bestselling author Sebastian Raschka guides you step by step through creating your own LLM. Each stage is explained with clear text diagrams and examples. You'll go from the initial design and creation to pretraining on a general corpus and on to fine-tuning for specific tasks. *Build a Large Language Model from Scratch* teaches you how to plan and code all the parts of an LLM: Prepare a dataset suitable for LLM training; Fine-tune LLMs for text classification and with your own data; Use human feedback to ensure your LLM follows instructions; Load pre-trained weights into an LLM. *Build a Large Language Model from Scratch* takes you inside the AI black box to tinker with the internal systems that power generative AI. As you work through each key stage of LLM creation, you'll develop an in-depth understanding of how LLMs work, their limitations, and their customization methods. Your LLM can be developed on an ordinary laptop and used as your own personal assistant. About the technology: Physicist Richard P. Feynman reportedly said, "I don't understand anything, I can't build." Based on this same powerful principle, bestselling author Sebastian Raschka guides you step by step as you build a GPT-style LLM that you can run on your laptop. This is an engaging book that covers each stage of the process from planning and coding to training and fine-tuning. About the book: *Build a Large Language Model From Scratch* is a practical and eminently satisfying hands-on journey into the foundations of generative AI. Without relying on any existing LLM libraries, you'll code a base model, evolve it into a text classifier, and ultimately create a chatbot that can follow your conversational instructions. And you'll really understand it because you built it yourself. What's inside: Plan and code an LLM comparable to GPT-2; Load pre-trained weights; Construct a

complete training pipeline Fine tune your LLM for text classification Develop LLMs that follow human instructions About the reader Readers need intermediate Python skills and some knowledge of machine learning The LLM you create will run on any modern laptop and can optionally utilize GPUs About the author Sebastian Raschka PhD is an LLM Research Engineer with over a decade of experience in artificial intelligence His work spans industry and academia including implementing LLM solutions as a senior engineer at Lightning AI and teaching as a statistics professor at the University of Wisconsin Madison Sebastian collaborates with Fortune 500 companies on AI solutions and serves on the Open Source Board at University of Wisconsin Madison He specializes in LLMs and the development of high performance AI systems with a deep focus on practical code driven implementations He is the author of the bestselling books Machine Learning with PyTorch and Scikit Learn and Machine Learning Q and AI The technical editor on this book was David Caswell Table of Contents 1

Reconstruction by Space Carving using Graphics Hardware Christian Nitschke, 2012-03-02 Diploma Thesis from the year 2006 in the subject Communications Research Studies Enquiries grade 1 University of Weimar language English abstract Reconstruction of real world scenes from a set of multiple images is a topic in Computer Vision and 3D Computer Graphics with many interesting applications There exists a powerful algorithm for shape reconstruction from arbitrary viewpoints called Space Carving However it is computationally expensive and hence can not be used with applications in the field of 3D video or CSCW as well as interactive 3D model creation Attempts have been made to achieve real time framerates using PC cluster systems While these provide enough performance they are also expensive and less flexible Approaches that use GPU hardware acceleration on single workstations achieve interactive framerates for novel view synthesis but do not provide an explicit volumetric representation of the whole scene The proposed approach shows the efforts in developing a GPU hardware accelerated framework for obtaining the volumetric photo hull of a dynamic 3D scene as seen from multiple calibrated cameras High performance is achieved by employing a shape from silhouette technique in advance to obtain a tight initial volume for Space Carving Also several speed up techniques are presented to increase efficiency Since the entire processing is done on a single PC the framework can be applied to mobile setups enabling a wide range of further applications The approach is explained using programmable vertex and fragment processors with current hardware and compared to highly optimized CPU implementations It is shown that the new approach can outperform the latter by more than one magnitude The downloadable introduction has been written specifically for this offer Its contents are only a subset of the real introductory chapter of the thesis [International Directory of Company Histories](#) Jay P.
