### **Understanding Obesity to Determine the Best Therapeutic Option: From Lifestyle Interventions to**

**Therapies** Evelyn Frias-Toral,Jorge Carriel-Mancilla,Florencia Ceriani,Almino Ramos,2025-02-21 We are currently facing an

obesity pandemic that affects individuals of all age groups geographic areas and social status among others Thus it is

essential to generate high quality scientific evidence to better understand this pathology its risk factors and its treatments

Several modifiable and non modifiable risk factors for the development of obesity have been identified It has been

demonstrated that obese patients have an increased risk of acquiring arterial hypertension diabetes dyslipidemia

cardiovascular diseases cancer and other chronic conditions In order to take efficient actions to reverse or prevent these

complications it is also crucial to delve into body composition lean mass fat bone mass and sarcopenia in patients with

obesity In recent months there have been developments in pharmacological therapies using GLP 1 GIP and glucagon agonists

which seem to change the rules of the game regarding therapeutic decision making in these patients worldwide However

surgical techniques such as sleeve gastrectomy and Roux en Y gastric bypass continue to be the most effective and definitive

interventions to achieve adequate weight loss in patients with obesity Despite the pharmacological development none of the

clinical trials have shown that the operated patients reach more than 30% of the total body weight as with bariatric surgery

techniques Furthermore it is fundamental to analyze the impact of diverse therapeutic non surgical and non pharmacological

options to address obesity such as cognitive behavioral interventions and different types of diets in combination with physical

activity
