**The Biology of Animal Viruses** Frank J. Fenner, B. R. McAuslan, C. A. Mims, 2013-09-17 The Biology of Animal Viruses Second Edition deals with animal viruses focusing on molecular biology and tumor virology. The book reviews the nature, chemical composition, structure, and classification of animal viruses. The text also describes the methods of isolating animal viruses, how they are grown in the laboratory, assayed, purified, and used in biochemical experiments. The book also describes the structure and chemistry of many known viruses such as the papovaviridae, herpes virus, poxvirus, coronavirus, or the Bunyamwera supergroup. The book then explains the structure and function of the animal cell, including the cytoplasmic organelles, the nucleus, inhibitors of cell function, and viral multiplication. Other papers discuss in detail the multiplication of the DNA and RNA viruses whose mechanisms of multiplication differ from those of other viruses. Other papers discuss the known prevention and treatment methods of viral diseases as well as the epidemiology and evolution of viral diseases resulting from human's disturbance of the biosphere and from medical and experimental innovations. The text can prove useful for immunologists, veterinarians, virologists, molecular researchers, students, and academicians in the field of cellular microbiology and virology.

Vaccines and Therapeutics Utilizing New Adjuvants and Potential Inhibitors to Target Emerging Infectious Diseases Jiae Kim, Ousman Jobe, Mara Jana Broadhurst, 2025-12-01 Emerging infectious diseases such as persistent infectious diseases that have not been controlled (e.g. HIV, dengue fever) those increasing in incidence (e.g. flaviviruses, food and waterborne pathogens) or previously unknown diseases have impacted populations throughout the world. These diseases require either preventative vaccines or proper therapeutics to mitigate global epidemics from emerging. Recent vaccine and therapeutic candidates have emerged and are moderately successful; however, there is still room for improvement with either long-lasting vaccine efficacy or therapeutics with maximal efficacy and minimal toxicity. New technologies are necessary for both preventative vaccines and therapeutics for emerging infectious diseases. As these diseases impact populations on a global scale, preventing infection is key. However, when that is not feasible, treatment strategies and specific therapeutics with minimal toxicity and side effects are just as critical in fighting such epidemics. This Research Topic aims to cover current and emerging technologies being explored to prevent or treat infectious diseases, including strategies currently in preclinical or clinical phase studies. We aim to bring together all aspects of research and development of these new technologies and invite vaccinologists, immunologists, pharmacologists, and other multidisciplinary groups to feed knowledge into these growing fields. This research will impact the current landscape of infectious diseases and may also provide interventions against future pandemics. We welcome the submission of Review and Original Research articles focusing on preclinical and clinical vaccines or therapeutic studies and Perspective and Opinion articles highlighting

the gaps in vaccines and therapeutics targeting emerging infectious diseases including viral or bacterial infections as well as multidrug resistant bacteria Articles may focus on but are not limited to the following subtopics Promising adjuvants in preclinical and clinical vaccine trials Promising inhibitors that target infectious diseases in preclinical studies Mechanism of action of novel inhibitors or adjuvants Formulations that target different sites of action i e mucosal regions
