Building and Training a GPT Model: A Comprehensive Code Tutorial Othman Omran Khalifa, 2025-12-23 The rapid advancement of artificial intelligence particularly in the field of large language models has fundamentally transformed how machines understand and generate human language Among these models Generative Pre trained Transformers GPT have emerged as one of the most influential architectures driving breakthroughs in natural language processing software development scientific research education and countless real world applications Despite their widespread use the internal mechanisms and training processes of GPT models often remain opaque to many learners and practitioners This book Building and Training a GPT Model A Comprehensive Code Tutorial was written to bridge that gap Rather than treating GPT models as black box tools this work invites readers to explore their inner workings in a structured practical and accessible manner The primary goal is to empower readers to move beyond model usage toward true model understanding designing implementing training evaluating and deploying GPT style architectures from the ground up The book is intentionally hands on and code driven Each concept is introduced with clear theoretical explanations and immediately reinforced through practical implementations using Python PyTorch and Hugging Face Transformers From tokenization and attention mechanisms to pre training objectives optimization strategies and deployment pipelines readers are guided step by step through the full lifecycle of a GPT model Wherever possible examples are drawn from real world scenarios to highlight both academic relevance and practical impact This book is intended for a broad audience including senior undergraduate and postgraduate students researchers engineers and professionals who seek a deeper research level understanding of generative AI While some familiarity with machine learning and Python programming is assumed the material is presented in a progressive manner that allows motivated readers to build confidence as they advance through the chapters Each chapter has been carefully designed to stand on its own while contributing to a coherent end to end learning journey Early chapters focus on architectural foundations and data preparation followed by detailed discussions on model construction and training Later chapters address evaluation optimization deployment and advanced topics preparing readers to apply GPT models responsibly and effectively in real world systems Ultimately this book is more than a technical manual it is an invitation to experiment question and innovate By demystifying GPT models and emphasizing reproducible well documented implementations it aims to equip readers with the skills and insight necessary to contribute meaningfully to the evolving landscape of generative artificial intelligence

BIM Geometry with Julia Plasm—Functional Language for CAD Programming Alberto Paoluzzi, Giorgio Scorzelli, 2026-01-01 This book provides computational methods tools algorithms code scriptlets and examples for symbolically generating simple and very complex geometric shapes as solid models and structures for Building Information Modeling BIM environments The book introduces the Programming Language for Symbolic Solid Modeling Plasm a concise symbolic design language for the construction industry It explains how to utilize the

recent adaptation to the MIT originated language Julia regarded as the premier modern language for scientific computing In this context the design is stored as a solid model and can be utilized by other Julia packages e g for mechanical thermal simulation etc It is important to note that very complex shapes including Boolean textures for new materials may be challenging if not impossible to describe using architectural CAD and even harder to encode within the entity class representation methods of the BIM collaboration standard On the other hand Plasm jl product object descriptions are straightforward to encode and symbolically export import They can be used as source strings within IFC files the collaborative platform for construction The sender and receiver of such files can receive the symbolic description the geometric breakdown atoms of Boolean algebra exported in the standard and the precise integral properties surface volume inertia The Julia Plasm language is an outstanding environment for teaching computer courses to architecture students and introducing BIM to new generations of ABC professionals who are already familiar with network tools and will create and innovate with geometric shapes while learning computational methods The PLASM language is a preeminent environment to teach computer courses to architecture students and introduce BIM to the new generations of ABC pros who are already acquainted with network instruments and will create and innovate with geometric shapes while learning computational methods
