

HOW TO READ A SAFETY DATA SHEET

OSHA Brief

The most recent version of Standard Practice (OSHA-SP-010-2010) (revised 2010), revised 2010, replaces the chemical hazard communication standard, Hazard Communication Standard (HCS), which is the standard for the classification and labeling of chemicals. The HCS is a hazard communication standard that is intended to protect workers and consumers from exposure to health and physical hazards associated with chemicals by providing information on the hazards and protective measures. The HCS also includes information on the classification of mixtures.

The HCS also includes information such as the properties of each hazard (i.e., physical, health, and environmental health hazards), protective measures, and safety precautions for handling, storing, using, and disposing of the chemical. This information is intended to be used in the workplace to protect workers and consumers from exposure to health and physical hazards associated with the use of chemicals.

Health Communication Standard (HCS) (sections 3 through 11) contains general information about the chemical, identification, hazard information, safe handling practices, and emergency control measures. This information should be helpful to those that must use the chemical in the workplace. This information is intended to be used in the workplace to protect workers and consumers from health and physical hazards. The HCS also includes hazard communication information, including the classification of mixtures and hazard statements that are applicable to the use of the chemical. The HCS also includes hazard statements that are applicable to the use of the chemical.

The HCS also includes sections 3 through 11 on the components that the HCS identifies and contains hazard statements for each component. The HCS will not contain the content of these sections because they concern mixtures (as defined by other agencies).
