Topics include anatomy, biochemistry, physiology, diseases and veterinary care.    *Ostrich Production Systems* M. M. Shanawany, John Holmes Dingle, 1999 A comprehensive review of all aspects of ostrich production including a series of case histories from some countries that farm ostriches commercially important countries such as South Africa, Namibia and Zimbabwe, newly re-emerging industries such as Australia and countries where production is less developed such as Kenya, Ethiopia and the United Arab Emirates UAE.    **Feed Management**, 1998

**Ostrich Farming** Lilly Curz, 2025-11-05 The ostrich belongs to the class Aves, order Struthioniformes and family Struthionidae. It is the only extant member of its family, making it taxonomically unique. Its scientific name is *Struthio camelus*, literally meaning camel bird, a reference to its long neck, legs and desert endurance. Ostriches share ancestry with other flightless ratites such as emus, rheas, cassowaries and kiwis. Among these, the ostrich is the largest and fastest on land, capable of running speeds exceeding 65-70 kilometers per hour. Subspecies and domesticated forms There are several recognized subspecies, though interbreeding in captivity has blurred their boundaries. Red-necked Ostrich (*S. c. camelus*) Found across North and East Africa, this subspecies is tall and robust, with a vivid red to pink hue on the neck and thighs, particularly in breeding males. It adapts well to arid, hot climates but is more aggressive and harder to manage in captivity. Blue-necked Ostrich (*S. c. australis*) Native to southern Africa, characterized by a bluish-grey neck and somewhat calmer temperament. It thrives in semi-arid savannas and is considered the most balanced in terms of productivity and manageability. African Black Ostrich (*S. c. domesticus*) A domesticated hybrid developed in South Africa by crossbreeding the Red-necked and Blue-necked varieties. Selective breeding for docility, early maturity and quality plumage produced the African Black, the standard stock for commercial farming worldwide. In practice, most farms use the African Black due to its superior reproductive performance, manageable temperament and adaptability to various environments. Understanding which genetic lines perform best in specific conditions remains an ongoing focus of ostrich research.
