Music Emotion Recognition Multimedia Computing Communication And Intelligence:

Music Emotion Recognition Yi-Hsuan Yang, Homer H. Chen, 2011-02-22 Providing a comprehensive review of existing work in music emotion developed in psychology and engineering this book explains how to account for the subjective nature of emotion perception in the development of automatic music emotion recognition MER systems Among the first publications dedicated to automatic MER it begins with a complete introduction to the essential aspects of MER including background key techniques and applications This ground breaking reference examines emotion from a dimensional perspective It defines emotions in music as points in a 2D plane in terms of two of the most fundamental emotion dimensions according to psychologists valence and arousal

Deep Learning in Personalized Music Emotion Recognition Yannik Venohr, 2025-04-28 Music has a unique power to evoke strong emotions in us bringing us to tears lifting us into ecstasy or triggering vivid memories Often described as a universal language it conveys feelings that transcend words But are machines too able to understand this language and capture emotions conveyed in music This book delves into the field of Musical Emotion Recognition MER aiming to develop a mathematical model to predict the emotional content of music It explores the fundamentals of this interdisciplinary research area including the relationship between music and emotions mathematical representations of music and deep learning algorithms Two MER models are developed and evaluated one employing handcrafted audio features with a long short term memory architecture and the other using embeddings from the pre trained music understanding model MERT Results show that MERT embeddings can enhance predictions compared to traditional handcrafted features Additionally driven by the subjectivity of musical emotions and the low inter rater agreement of annotations this book investigates personalized emotion recognition The findings suggest that personalized models surpass the limitations of general MER systems and can even outperform a theoretically perfect general MER system

From Sounds to Music and Emotions Mitsuko Aramaki, Mathieu Barthet, Richard Kronland-Martinet, Sølvi Ystad, 2013-09-12 This book constitutes the thoroughly refereed post conference proceedings of the 9th International Symposium on Computer Music Modeling and Retrieval CMMR 2012 held in London UK in June 2012 The 28 revised full papers presented were carefully reviewed and selected for inclusion in this volume The papers have been organized in the following topical sections music emotion analysis 3D audio and sound synthesis computer models of music perception and cognition music emotion recognition music information retrieval film soundtrack and music recommendation and computational musicology and music education The volume also includes selected papers from the Cross Disciplinary Perspectives on Expressive Performance Workshop held within the framework of CMMR 2012

Advances in Visual Data Compression and Communication Feng Wu, 2014-07-25 Visual information is one of the richest and most bandwidth consuming modes of communication To meet the requirements of emerging applications powerful data compression and transmission techniques are required to achieve highly efficient communication even in the presence of growing communication channels that offer increased bandwidth

Presenting the results of the author's years of research on visual data compression and transmission *Advances in Visual Data Compression and Communication Meeting the Requirements of New Applications* provides a theoretical and technical basis for advanced research on visual data compression and communication. The book studies the drifting problem in scalable video coding, analyzes the reasons causing the problem, and proposes various solutions to the problem. It explores the author's Barbell-based lifting coding scheme that has been adopted as common software by MPEG. It also proposes a unified framework for deriving a directional transform from the nondirectional counterpart. The structure of the framework and the statistic distribution of coefficients are similar to those of the nondirectional transforms, which facilitates subsequent entropy coding. Exploring the visual correlation that exists in media, the text extends the current coding framework from different aspects, including advanced image synthesis from description and reconstruction to organizing correlated images as a pseudo sequence. It explains how to apply compressive sensing to solve the data compression problem during transmission and covers novel research on compressive sensor data gathering, random projection codes, and compressive modulation. For analog and digital transmission technologies, the book develops the pseudo analog transmission for media and explores cutting edge research on distributed pseudo analog transmission, denoising in pseudo analog transmission, and supporting MIMO. It concludes by considering emerging developments of information theory for future applications. **Multimedia**

Computing and Systems International Conference on Multimedia Computing and Systems, 1999. This two volume set contains the proceedings of the June 1999 conference devoted to presenting and exploring scientific and technological advancements, innovations, opportunities, and solutions in Multimedia applications. Among other topics, the 318 contributions cover quality of service, network management, and distributed multimedia systems, video compression, web and video servers, virtual and augmented reality, computer graphics and animation, multimodal interaction, and usability, content-based retrieval from image and video databases, authoring tools, software engineering technologies for multimedia, electronic commerce, and educational, cultural heritage, and medical applications. Human-Computer Interaction Mirjam Augstein, Eelco Herder, Wolfgang Wörndl, 2019-09-23. Personalized and adaptive systems employ user models to adapt content, services, interaction, or navigation to individual users' needs. User models can be inferred from implicitly observed information such as the user's interaction history or current location, or from explicitly entered information such as user profile data or ratings. Applications of personalization include item recommendation, location-based services, learning assistance, and the tailored selection of interaction modalities. With the transition from desktop computers to mobile devices and ubiquitous environments, the need for adapting to changing contexts is even more important. However, this also poses new challenges concerning privacy issues, user control, transparency, and explainability. In addition, user experience and other human factors are becoming increasingly important. This book describes foundations of

user modeling discusses user interaction as a basis for adaptivity and showcases several personalization approaches in a variety of domains including music recommendation tourism and accessible user interfaces
