**Procedures: HMA overlays of existing HMA and composite pavements**, 2008 ODOT initiated this research study to determine 1 the impact of milling off portions of the existing pavement on the structural capacity of the remaining pavement and 2 whether currently recommended HMA structural coefficients adequately reflect the structural properties of new HMA overlay materials. The study mainly focused on the impact of milling on the design of HMA overlays over existing flexible pavements and composite pavements. Volume I of the report deals with this main study focus area. During the course of the study an additional focus area was added to the project to investigate the impact of completely milling off existing HMA layers in composite pavement systems on unbonded overlay design. Volume II of this report deals with impact of milling on unbonded overlays. Volume I describes the structural evaluation of individual flexible and composite pavement projects located at different sites throughout Ohio as well as an analysis of the evaluation results to develop enhancements to the ODOT HMA overlay design procedure as needed. The report presents detailed descriptions of the projects evaluated field testing procedures employed procedures adopted for analyzing field testing data and other data collected structural evaluation results analysis of results and recommendations for improvements of the current ODOT overlay design procedure. Volume II presents descriptions of the data collected data analysis observations and recommendations for improvements of the current ODOT overlay design procedure. **Direct and Indirect Non-target Effects of Cry3Bb Bt Corn** Erin Joyce Stephens, 2006 *Books In Print 2004-2005* Ed Bowker Staff, Staff Bowker, Ed, 2004 **Wildlife Research**, 2009

*Evaluation of Gateway and Low-cost Traffic Calming Treatments for Major Routes in Small Rural Communities ,2007*

Many rural communities have developed around highways or major county roads as a result the main street through small rural communities is often part of a high speed rural highway Highways and county roads are characterized by high speeds outside the city limits they then transition into a reduced speed section through the rural community Consequently drivers passing through the community often enter at high speeds and maintain those speeds as they travel through the community Traffic calming in small rural communities along major roadways is common in Europe but the U S does not have experience with applying traffic calming measures outside of major urban areas The purpose of the project was to evaluate traffic calming treatments on the major road through small Iowa communities using either single measure low cost or gateway treatments The project was partially funded by the Iowa Highway Research Board IHRB The focus of the IHRB portion was to evaluate single measure low cost traffic calming measures that are appropriate to major roads through small communities The research evaluated the use of two gateway treatments in Union and Roland five single measure treatments speed table on pavement SLOW markings a driver speed feedback sign tubular markers and on pavement entrance treatments were evaluated in Gilbert Slater and Dexter
