Dr Amy Banks teaches us how to rewire our brains for healthier relationships and happier, more fulfilling lives. We all experience moments when we feel isolated and alone. A 2006 Purdue University study found that twenty five percent of Americans cannot name a single person they feel close to. Yet every single one of us is hardwired for close relationships. The key to more satisfying relationships be it with a significant other, a family member or a colleague is to strengthen the neural pathways in our brains that encourage closeness and connection. The Neuroscience of Human Relationships Louis Cozolino, 2014-03-24

A revised edition of the best selling text on how relationships build our brains. As human beings we cherish our individuality yet we know that we live in constant relationship to others and that other people play a significant part in regulating our emotional and social behavior. Although this interdependence is a reality of our existence we are just beginning to understand that we have evolved as social creatures with interwoven brains and biologies. The human brain itself is a social organ and to truly understand being human we must understand not only how we as whole people exist with others but how our brains themselves exist in relationship to other brains. The first edition of this book tackled these important questions of interpersonal neurobiology that the brain is a social organ built through experience using poignant case examples from the author's years of clinical experience. Brain drawings and elegant explanations of social neuroscience wove together emerging findings from the research literature to bring neuroscience to the stories of our lives. Since the publication of the first edition in 2006 the field of social neuroscience has grown at a mind numbing pace. Technical advances now provide more windows into our inner neural universe and terms like attachment, empathy, compassion and mindfulness have begun to appear in the scientific literature. Overall there has been a deepening appreciation for the essential interdependence of brain and mind. More and more parents, teachers and therapists are asking how brains develop, grow, connect, learn and heal. The new edition of this book organizes this cutting edge abundant research and presents its compelling insights reflecting a host of significant developments in social neuroscience. Our understanding of mirror neurons and their significance to human relationships has continued to expand and deepen and is discussed here. Additionally this edition reflects the gradual shift in focus from individual brain structures to functional neural systems an important and necessary step forward. A great deal of neural overlap has been discovered in brain activation when we are thinking about others and ourselves. This raises many questions including how we come to know others and whether the notion of an individual self is anything more than an evolutionary strategy to support our interconnection. In short we are just beginning to see the larger implications of all neurological processes how the architecture of the brain can help us to better understand individuals and our relationships. This book gives readers a deeper appreciation of how and why relationships have the power to reshape our brains throughout our life.
