#### Nikon VR system — Lending a steady hand for sharper images.

One reason why cameras have been a great shot this fall is Nikon's VR (Vibration Reduction) lens system. It's allowing you to shoot handheld photos as if you were using a tripod. That's when using lenses without VR, the results are often blurry under conditions that would normally require use of a tripod. Additionally, using a camera's vibration reduction system, Nikon's off to the line in a fast and significantly improved handheld imaging.

#### To the moon and beyond:

The unmatched reliability and performance of these cameras and NIKKOR lenses earned their place in NASA's newest space-based imaging and video-making cameras. As the first Nikon cameras to be put to photographic use in orbit, these cameras are a part, and in the example of your own, every NIKKOR contributes the function, enhancing mission performance at the photographic orbit.
