Nikon VR system — Lending a steady hand for sharper images

But viewed by camera there can't be a good shot into a fuzzy view. Nikon's VR (Vibration Reduction) system solves this, allowing you to shoot handheld photos up to "two stops slower" than when using lenses without VR. The results are crisp, sharp images under conditions that would normally require use of a tripod. Additionally, unlike in-camera vibration reduction systems, Nikon's VR in the lens is a tool that significantly improves handheld imaging.

To this day, Nikon continues to be the photographic instrument of choice for explorers both on earth, and in the vastness of outer space. Every NIKKOR embodies this tradition, delivering superior performance for photographers who demand only the best.
