Neuropsychoanalysis In Practice Brain Self And Objects:

Neuropsychoanalysis in Practice Georg Northoff, 2011-06-23 Neuropsychoanalysis in Practice links the psyche's different psychodynamic processes to specific neuronal mechanisms in the brain. The book focuses specifically on how the brain is organized and how this organization enables the brain to differentiate between neuronal and psychodynamic states that is the brain and the psyche. **Cultural Memory** Donald R. Wehrs, Suzanne Nalbantian, Don M. Tucker, 2022-11-29 Bringing together neuroscientists, social scientists, and humanities scholars in cross disciplinary exploration of the topic of cultural memory, this collection moves from seminal discussions of the latest findings in neuroscience to variegated specific case studies of social practices and artistic expressions. This volume highlights what can be gained from drawing on broad interdisciplinary contexts in pursuing scholarly projects involving cultural memory and associated topics. The collection argues that contemporary evolutionary science in conjunction with studies interconnecting cognition, affect, and emotion as well as research on socially mediated memory provides innovatively interdisciplinary contexts for viewing current work on how cultural and social environments influence gene expression and neural circuitry. Building on this foundation, Cultural Memory turns to the exploration of the psychological processes and social contexts through which cultural memory is shaped, circulated, revised, and contested. It investigates how various modes of cultural expression—architecture, cuisine, poetry, film, and fiction—reconfigure shared conceptualizing patterns and affectively mediated articulations of identity and value. Each chapter showcases research from a wide range of fields and presents diverse interdisciplinary contexts for future scholarship. As cultural memory is a subject that invites interdisciplinary perspectives and is relevant to studying cultures around the world of every era, this collection addresses an international readership comprising scholars from the humanities, social sciences, and natural sciences, from advanced undergraduates to senior researchers.

Groundwork for a Transpersonal

Psychoanalysis Robin Brown, 2019-09-18 This book explores how a deeper engagement with the theme of spirituality can challenge and stimulate contemporary psychoanalytic discourse. Bringing relational psychoanalysis into conversation with Jungian and transpersonal debates, the text demonstrates the importance of questioning an implicit reliance on secular norms in the field. With reference to recognition theory and shifting conceptions of enactment, Brown shows that the continued evolution of relational thinking necessitates an embrace of the transpersonal and a move away from the secular viewpoint in analytic theory and practice. With an outlook at the intersection of intrapsychic and intersubjective perspectives, *Groundwork for a Transpersonal Psychoanalysis* will be a valuable resource to analysts looking to incorporate a more pluralistic approach to clinical work.

The Dynamic Self in Psychoanalysis Rosa Spagnolo, Georg Northoff, 2021-10-27 The Dynamic Self in Psychoanalysis builds a bridge between two different but intertwined disciplines: psychoanalysis and neuroscience by examining the Self and its dynamics at the psychological and neuronal level. Each chapter presents clinical examples which demonstrate the evolution of the spatiotemporal and affective dimensions of the Self in a variety of psychopathologies. The Self in Neuroscience and Psychiatry Tilo Kircher, Anthony S. David, 2003-08-07 In recent years the clinical and cognitive sciences and neuroscience have contributed important insights to understanding the self.
