W. Licht, Preben B. Mortensen, Lars Vedel Kessing, 2004 **Construct Validity of the RBANS Forms A and B** Erica Lopez, 2018 The Repeatable Battery for the Assessment of Neuropsychological Status RBANS Randolph 1998 is a standardized assessment that was designed to measure cognitive function in older adults The RBANS is a commonly used neuropsychological assessment with moderate support of its clinical utility However the RBANS was developed theoretically without the use of factor analytic studies Previous studies evaluating the factor structure of the

RBANS failed to provide significant support for Randolph's proposed five factor structure. The purpose of this study was to evaluate the proposed five factor structure of the RBANS Forms A and B using a Confirmatory Factor Analysis (CFA) in a homogeneous geriatric population of healthy adults. Results of the RBANS Form A suggest a three factor solution. The first factor was defined as a Memory and Attention index. Factor two was defined as a Learning index and Factor Three was defined as a Visuospatial Function and Language index. An additional CFA was conducted on the RBANS Forms A and B combined to determine if combining forms would yield the proposed five factor structure. Results found the combined forms to also fit a three factor structure. Additionally, the current study conducted a CFA on the RBANS and WAIS IV combined to evaluate if similar subtests loaded together in the same factors convergent validity.
