

## Checking the basic setup of the telescopic fork

The precise riding sag of the telescopic fork cannot be determined for various reasons. Similar to the shock absorber, smaller deviations in your weight can be compensated by adjusting the spring preload. However, if your telescopic fork bumps frequently (hard end stop during compression), you should install harder fork springs to avoid damaging the telescopic fork and frame.

## Changing the spring preload on the telescopic fork (250 SX-F/XX-F) \*

The fork legs must be partly disassembled to change the spring preload (see WP repair manual). Preload spacers in various thicknesses are available (see spare parts catalog).

**NOTE:** WP precisely adjusts the spring pressure by inserting preload spacers. Fluctuations in production are compensated with preload spacers in various heights. This can cause the fork springs in the fork legs to have different degrees of preload. Fork springs and preload spacers should always stay together.

## Changing the spring preload on the telescopic fork (250 XCF-W/EXC-F/EXC-F Six Days)

The telescopic forks of these models come with a preload adjuster for easy adjustment of the spring preload.

### STANDARD ADJUSTMENT:

- Completely unscrew the adjusting screws in a counterclockwise direction.
- Screw the number of turns back in specified for your fork type in a clockwise direction.

WP 14.18.70.04 ..... 2      WP 14.18.70.34 ..... 2

Turning in a clockwise direction will increase the prestress, turning in a counterclockwise direction will decrease the prestress.

Changing the spring preload will not affect the rebound damping adjustment. Generally, if the spring preload is higher, the rebound damping should also be set higher.

**NOTE:** Always turn the adjusting screws the same distance on both fork legs. Different spring preloads on the fork legs will reduce the telescopic fork's response.

## Replacing fork springs

If you weigh less than 75 kg or more than 85 kg, you should install the respective fork springs. The correct spring rate is shown in the illustrations. The standard spring is shown in bold print. The type number of the telescopic fork is embossed on the fork finds.

If you are uncertain which spring to use, contact your KTM workshop.

According to our experience, the damping rate of the compression stage can remain unchanged. The damping rate of the rebound stage can be reduced by a few clicks for a softer spring or increased by a few clicks for a harder spring.
