***Pathology of the Gastro-Intestinal Tract*** B. Morson,2012-12-06 Immunology in all its facets of immunochemistry humoral immunity cellular immunity immunodiagnosis and immunotherapy is currently the most rapidly advancing discipline of clinical and experimental oncology But as in most developing subjects it is continually beset with problems of methodology and nomenclature both of which are often intertwined Indicative of this problem are our circular definitions of antigen and antibody Another frequent problem is the use of the words specific and associated when characterizing reactions to tumors or the antigenic properties of neoplasms When applied to cancer these terms are obviously very dependent upon the methods used to demonstrate these qualities Indeed the very diverse nature and multitude of types of cancer preclude our making generalizations or categorical statements regarding tumor specificity Similar problems arise when one considers that many antigens found in malignant tumors share certain properties with

embryonic or fetal tissues First these observations emphasize a lack of true tumor specificity for which reason the category of oncofetal antigens has been established Second whether or not such antigens are truly oncofetal depends upon the method of detection used and it has been found that here too specificity decreases as the antigen assay increases in sensitivity Thus whether substances can be truly oncofetal in nature still remains a matter of debate and such terms must therefore be used in an operational sense

**Gastrointestinal System** Elizabeth A. Montgomery,Whitney M. Green,2015-01-07 Systematically solve tough diagnostic challenges in GI pathology with Differential Diagnoses in Surgical Pathology Gastrointestinal Tract This clinical reference in the Differential Diagnoses in Surgical Pathology Series uses select images of clinical and pathological findings together with succinct expert instructions to guide you through the decision making process by distinguishing between commonly confused Gastrointestinal lesions     Non-neoplastic Pathology of the Gastrointestinal Tract Roger Feakins,2019 Prior to the development of the first fibre optic endoscopes in the 1960's gastroenterology in common with other traditional medical specialties relied on biochemical and radiological techniques in order to investigate the gastrointestinal tract Histological confirmation of a disease process usually required the presence of a surgeon was invasive and carried inherent risks Because of a rapid improvement in technology we are now able to sample the entire gastrointestinal tract from the mouth and anus through to the ileal jejunal junction     Gastrointestinal Pathology Geraint T. Williams,2012-12-06 There have been many advances in the field of gastrointestinal pathology which are of considerable clinical significance during the 13 years since the last publication of a volume of Current Topics in Pathology devoted to this subject Many have arisen from the application of new techniques of histochemistry immunocytochemistry quantitative morphometry and molecular and cell biology to gastrointestinal diseases but some notably the recognition of the association of *Campylobacter pylori* with the commonest type of chronic gastritis have been achieved using such long established routine histological procedures that one wonders how their significance had escaped recognition for so long The topics covered in this volume have been selected because they present advances of relevance to the diagnostic clinical pathologist However they're present the personal selection of the editor and are in no way exhaustive Many other examples of progress in our understanding of the pathophysiology of

gastrointestinal diseases have been omitted either because of the confines of space or because they have been well reviewed recently in other publications. Most of the workload of the practising gastrointestinal pathologist involves the diagnosis and assessment either of inflammation or of neoplasia in the alimentary tract and this is reflected in the topics presented in this book. Gastrointestinal and Liver Pathology Christine A. Iacobuzio-Donahue, Elizabeth A. Montgomery, 2005. Examines the full scope of neoplastic and non neoplastic disorders of the gastrointestinal tract: esophagus, stomach, small intestine, appendix, colon and anus, liver, gallbladder, extrahepatic biliary tract and pancreas. Coverage includes clinical features, gross and microscopic pathologic features, ancillary studies, differential diagnoses, prognostic and therapeutic considerations, and bibliographic references to the most important literature on the topic. The highly templated practical format with a wealth of helpful illustrations, boxes and tables make this series ideal for quick reference.
