Patterns In Freshwater Fish Ecology:

Patterns in Freshwater Fish Ecology William J. Matthews, 1998-01-31 This book is about freshwater fish in streams lakes reservoirs and special habitats around the world. It addresses approximately twenty major topics in freshwater fish ecology in a format suitable for use in graduate level courses. The book focuses on basic ecology and contains much data from fisheries ecology. Dr Matthews explains the way in which empirical studies theoretical concepts and experimental evaluations blend into the current state of the art with respect to each major topic and provides original data and interpretations on some points as well as new syntheses. Each chapter contains empirical information a synthesis and a summary

Freshwater Fish Ecology William J. Matthews, 2011-09-26 Nearly a decade ago I began planning this book with the goal of summarizing the existing body of knowledge on ecology of freshwater fishes in a way similar to that of H B N Hynes comprehensive treatise *Ecology of Running Waters* for streams. The time seemed appropriate as there had been several recent volumes that synthesized much information on a range of topics important in fish ecology from biogeographic to local scales. For example the Fish Atlas Lee et al 1980 had provided range maps and basic entry to the original literature for all freshwater fishes in North America and in 1986 Hocutt and Wiley's *Zoogeography of North American Fishes* provided a detailed synthesis of virtually everything known about distributional ecology of fishes on that continent. Tim Berra 1981 had summarized in convenient map form the worldwide distribution of all freshwater fish families and Joe Nelson's 1976 and 1984 editions of *Fishes of the World* had appeared. To complement these big picture views of fish distributions the volume on *Community and Evolutionary Ecology of North American Freshwater Fishes* edited by David Heins and myself Matthews and Heins 1987 had provided an opportunity for more than 30 individuals or groups to summarize their work on stream fishes albeit mostly for warmwater systems

,2011 *New Zealand Freshwater Fishes* R.M. McDowall,2010-07-27 In many ways this book is the culmination of more than four decades of my exp ration of the taxonomy biogeography and ecology of New Zealand s quite small freshwater fish fauna I began this firstly as a fisheries ecologist with the New Zealand Marine Department then responsible for the nation s fisheries research and mana ment and then with my PhD at the Museum of Comparative Zoology at Harvard University Cambridge MA USA in the early mid 1960s Since then employed by a series of agencies that have successively been assigned a role in fisheries research in New Zealand I have been able to explore very widely the natural history of that fauna Studies of the fishes of other warm to cold temperate southern lands have followed particularly southern Australia New Caledonia Patagonian South America the Falkland Islands and South Africa and in many ways have provided the rather broader context within which the New Zealand fauna is embedded in terms of geography phylogeny and evolutionary history and knowing this context makes the patterns within New Zealand all the clearer An additional stream in these studies in substantial measure driven by the beh ioural ecology of these fishes round the Southern Hemisphere has been exploration of the role of diadromy regular migrations between marine and freshwater biomes in fisheries ecology and biogeography and eventually of diadromous fishes wor wide *Freshwater Fishes of North America* Melvin L. Warren Jr.,Brooks M. processes in Australia with those on other continents discusses the local relevance of ecological models from the northern hemisphere and considers how best to manage our species and their habitats in the face of current and future threats In view of these challenges the need for redress is urgent The chapters are written by some of our foremost researchers and managers developing themes that underpin our knowledge of the ecology conservation and management of fish and fish habitats For each theme the authors formulate a synthesis of what is known consider the need for new perspectives and identify gaps and opportunities for research monitoring and management The themes have an Australian context but draw upon ideas and principles developed by fish biologists in other parts of the world The science of freshwater fish ecology in Australia has grown rapidly from its roots in natural history and taxonomy This book offers an introduction for students researchers and managers one that the authors hope will carry Australian fish biology and resource management to new levels of understanding

Stream Fish Community Dynamics William J. Matthews, Edie Marsh-Matthews, 2017-05

The most comprehensive synthesis of stream fish community research ever produced Winner of the CHOICE Outstanding Academic Title of the Choice ACRL Ecologists have long struggled to understand community dynamics In this groundbreaking book leading fish ecologists William Matthews and Edie Marsh Matthews apply long term studies of stream fish communities to several enduring questions This critical synthesis reaches to the heart of ecological theory testing concepts against the four decades of data the authors have collected from numerous warm water stream fish communities in the central and eastern United States Stream Fish Community Dynamics draws together the work of a single research team to provide fresh analyses of the short and long term dynamics of numerous streams each with multiple sampling sites

Conducting repeated surveys of fish communities at temporal scales from months to decades the authors research findings will fascinate anyone searching for a deeper understanding of community ecology The study sites covered by this book range from small headwater creeks to large prairie rivers in Oklahoma and from Ozark and Ouachita mountain streams in Arkansas to the upland Roanoke River in Virginia The book includes A comparison of all global and local communities with respect to community composition at the species and family level emergent community properties and the relationship between those emergent properties and the environments of the study sites Analyses of traits of individual species that are important to their distribution or success in harsh environments A review of evidence for the importance of interactions including competition and predation in community dynamics of stream fishes An assessment of disturbance effects in fish community dynamics New analysis of the short and long term dynamics of variation in stream fish communities illustrating the applicability and importance of the loose equilibrium concept New analyses and comparisons of spatiotemporal variation in

community dynamics and beta diversity partitioning An overview of the effects of fish in ecosystems in the central and eastern United States The book ends with a summary chapter that places the authors findings in broader contexts and describes how the loose equilibrium concept which may be the most appropriate default assumption for dynamics of stream fishes in the changing climate of the future applies to many kinds of stream fish communities

Historical Changes in

Large River Fish Assemblages of the Americas John N. Rinne,Robert M. Hughes,Robert Calamusso,2005 Dramatic changes have occurred in the functioning of larger rivers because of social values and policies land use inchannel causes and alien species These changes have resulted in the reduction in range and abundance of many native fish species This book describes the historical changes observed in the fish assemblages of 27 large rivers in North Central and South America A synthesizing chapter highlights common and distinct patterns among the rivers and their stressors The book focuses on entire fish assemblages including the many species that do not enter fisheries It will be of interest to both fishery biologists and aquatic ecologists who are concerned with the status and trends in biodiversity and biointegrity Contains historical information as well as new research and monitoring results including research on metapopulations genetics and life history strategies
