Transdisciplinary Solutions for Sustainable Development Mark Charlesworth,2015-05-15 Global environmental issues such as climate change and species loss are intensifying despite our best efforts to combat them The key reason for this is that the drivers of these problems are closely linked to the industrialism and consumerism that are promoted by governments and other organizations the world over This innovative book identifies the key issues that block progress in sustainable development and proposes transdisciplinary solutions Presenting a review of the epistemology and ethics of this policy field including current policy responses it examines the ethical and policy implications from a multidisciplinary perspective The book explains the current limitations of scientific prediction for global environmental issues and develops innovative approaches to respond to these difficulties drawing out lessons that will make sustainable development policy more democratic plural and open This book will be of great interest to students and researchers in environmental policy

development studies politics economics and sustainable development *Global Climate Change* Arnold J. Bloom, 2010 This work examines the factors responsible for global climate change and the geophysical biological economic legal and cultural consequences of such changes Nature-based solutions for climate change adaptation Andrea Ghermandi, Nalini Rao, Emma Ferranti, Petina Pert, 2025-11-10 Climate change poses complex challenges to the world in the form of extreme weather such as increased precipitation droughts flooding and heat waves These risks have significant impacts on ecosystems and communities which vary depending on their baseline vulnerability These include risks to human life human health property infrastructure ecosystem health and access to water and energy Climate change adaptation becomes crucial in adjusting to life under these changing conditions Some examples of adaptation include integrating robust and flexible operations modifying infrastructure managing the timing of engineering activities capacity building managing disaster risks modifying ecosystem or community based approaches strengthening stakeholders for decision making designing new financing mechanisms and using data driven methods to improve resilience One important area of focus for climate adaptation is Nature based Solutions NbS Nature based Solution NbS refers to a suite of activities that integrate natural ecosystems and processes into various systems The drivers for integration can include increasing efficiency improving environmental impacts creating multiple benefits and reducing resource use to name a few NbS activities have been used to upgrade water systems reduce heat island effects improve stormwater management green infrastructure building and upgrading efforts and provide multiple benefits to both ecosystems and communities While NbS is not a novel concept more research on the conceptual and technical aspects is needed to form a strong foundation from which applications can be designed Research on the potential of NbS activities for specific climate change adaptation needs could unveil key insights in applicability measurement effectiveness and scalability The types of research needed to address climate change adaptation through NbS are very wide ranging The presentation of conceptual frameworks and links between NbS and similar concepts including ecosystem services ecosystem based adaptation green infrastructure and passive treatment is important to articulate and clarify for use and integration in the climate adaptation context Evaluating the targeted implementation of NbS across landscapes coastal regions and watersheds as well as exploring its applicability in sectors like energy water forestry agriculture industry and the public sector are crucial areas of investigation Specific analysis of NbS designed to address critical risks such as floods droughts hurricanes and heatwaves could bring insights to different regions around the world Technical studies encompassing hydrology pollution control geospatial analysis environmental engineering and economics will offer essential guidance on where and how to implement NbS for climate change adaptation We invite researchers to explore and analyze the potential of Nature based Solutions NbS for Climate Change Adaptation We will consider a wide range of approaches from conceptual frameworks to analysis of technical solutions We encourage authors around the world to submit papers along the following themes Conceptual frameworks for NbS Examples of NbS in various

ecosystem and regional contexts Comparative analysis of NbS and traditional solutions Advanced methods for modeling and estimating NbS outcomes Spatial and or temporal issues in NbS implementation monitoring and modeling Potential of Nbs in modifying infrastructure NbS applications to different sectors and scales e g urban and rural Scalability and replicability of NbS Lessons learned and NbS s risks for maladaptation Economic impacts financing and natural capital accounting and NbS Potential for self sustaining funding for NbS
