Pediatric Hematology Oncology In Countries With Limited Resources A Practical Manual:

Pediatric Hematology-Oncology in Countries with Limited Resources Daniela Cristina Stefan, Carlos

Rodriguez-Galindo, 2013-11-18 Typically manuals of pediatric hematology oncology are written by specialists from high income countries and usually target an audience with a sub specialist level of training often assisted by cutting edge diagnostic and treatment facilities. However approximately 80% of new cases of cancer in children appear in mid and low income countries. Almost invariably general practitioners or general pediatricians without special training in oncology will look after children with malignancies who enter the health care system in these countries. The diagnostic facilities are usually limited as are the treatment options. The survival figures in these conditions are somewhere below 20% while in high income countries they are in the range of 80% for many childhood cancers. *Pediatric Hematology Oncology in Countries with Limited Resources* is the only book of its kind to provide specific guidance applicable to limited resource settings and builds up from the foundation of general practitioner or general pediatrician competence. Written and edited by leaders in the field this manual educates physicians on the essential components of the discipline filtered through the experience of specialists from developing countries with immediate applicability in the specific healthcare environment in these countries.

Neurooncology Amit Agrawal, 2016-07-13 The book contains the information of various aspects of newer developments and recent advances in the field of central nervous system CNS tumor molecular biology tumor progression clinical presentation imaging and management. The authors from different reputed institutions shared their knowledge on this open access platform to disseminate their knowledge at global level. As it is obvious in the current text the field of neurooncology is heterogeneous and under continuous development with addition of new knowledge and information on regular basis. The collective contributions from experts attempt to provide updates regarding ongoing research and developments pertaining to CNS tumor genetics and molecular aspects and their applied aspect in reference to patient management.
