18. Write the genotypes for each individual on the pedigree.

19. When working through a pedigree, the first thing you need to do is figure out which characteristic is dominant – the shaded one or the un-shaded one. Then you need to choose a letter (let's use A) and begin assigning genotypes. Remember that recessive individuals are **always** homozygous, so assign their genotypes first. Then go back and look at all of the dominant individuals. For some, you will only be able to determine one allele of the phenotype, so just write the one capital allele followed by a question mark (A?).

- (b) Which phenotype is dominant? Red
 (c) Which phenotype is recessive? White
 (d) Determine the genotypes of all individuals. You will have three "X's". Write your Genotypes beneath each individual.
