This first of its kind textbook demonstrates that anyone can ideate through specific logical processes that require no creativity when used but generate valuable and creative outcomes To help students master and apply these methods the book is filled with innovation examples across many sectors that can be explained and recreated using a specific LCT method The book also includes exercises that enable readers to practice applying each method to solve real life innovation challenges Upper level undergraduate and postgraduate students of innovation creativity and new product development will appreciate the demystification of ideation into a problem that can be solved by applying a series of rigorous defined methods that can be followed without ambiguity
