Paradigms in Green Chemistry and Technology Angelo Albini, Stefano Protti, 2015-12-08 This brief discusses the formation of modern green chemistry as a contribution to sustainability and the historic paths that lead to the key concepts of this discipline. Within this intellectual framework the book tackles the 12 principles of green chemistry and the 12 principles of green chemical engineering as well as related financial and management issues. These facts are explored and reformulated in a focused set of paradigms. The best choice of a model for quantitative assessment sufficiently specific to account for the many parameters involved but not excessively detailed to inhibit practical use is discussed and examples of practical applications are presented.

Green Metrics, Volume 11, 2018-05-07 Volume 11 of the Handbook of Green Chemistry series identifies, explains, and expands on green chemistry and engineering metrics, describing how the two work together backed by numerous practical applications. Up to date and authoritative, this ready reference covers the development and application of sustainable chemistry along with engineering metrics in both academia and industry, providing the latest information on fundamental aspects of metrics, practical realizations, and example case studies. Additionally, it outlines how metrics have been used to facilitate developments in sustainable and green chemistry. The different concepts of and approaches to metrics are applied to fundamental problems in chemistry and the focus is firmly placed on their use to promote the development and implementation of more sustainable and green chemistry and technology in the production of chemicals and related products. Starting with molecular design followed by chemical route evaluation, chemical process metrics and product assessment by the end, readers will have a complete set of metrics to choose from as they move a chemical conception to final product. Of high interest to academics and chemists working in industry.

Polymer Science from 1935-1953 Gary Patterson,2014-06-30 This sequel to *A Prehistory of Polymer Science* begins with the Faraday Discussion of 1935 on Polymerization Patterson then examines the remarkable rise and establishment of polymer science after 1935 from the perspective of the emergence of strong intellectual leaders While enough biographical detail is presented to gain an appreciation for the role played by each leader the emphasis of this volume is on the key concepts associated with each individual and how the community embraced these leaders

A Prehistory of Polymer Science Gary Patterson Carnegie Mellon University,2011-10-15 Polymer science is now an active and thriving community of scientists engineers and technologists but there was a time not so long ago when there was no such community The prehistory of polymer science helps to provide key insights into current issues and historical problems The story will be divided into an ancient period from Greek times to the creation of the molecular consensus a nascent period from Dalton to Kekulé to van t Hoff and a period of paradigm formation and controversy from Staudinger to Mark to Carothers The prehistory concludes with an account of the epochal 1935 Discussion of the Faraday Society on Polymerization After this meeting an active community engaged in trying to solve the central problems defined by the discussions

Chemical Optimization Algorithm for Fuzzy Controller

Design Leslie Astudillo, Patricia Melin, Oscar Castillo, 2014-03-13 In this book a novel optimization method inspired by a paradigm from nature is introduced. The chemical reactions are used as a paradigm to propose an optimization method that simulates these natural processes. The proposed algorithm is described in detail and then a set of typical complex benchmark functions is used to evaluate the performance of the algorithm. Simulation results show that the proposed optimization algorithm can outperform other methods in a set of benchmark functions. This chemical reaction optimization paradigm is also applied to solve the tracking problem for the dynamic model of a unicycle mobile robot by integrating a kinematic and a torque controller based on fuzzy logic theory. Computer simulations are presented confirming that this optimization paradigm is able to outperform other optimization techniques applied to this particular robot application.

Towards Mesoscience Jinghai Li, Wenlai Huang, 2014-01-24 This brief is devoted to providing a complete outline of meso science by briefing the relevant contents from the published book and by updating evidences and concepts of meso science. The importance of meso science in solving various problems in energy resource and the environment is introduced. The whole evolutionary development of the EMMS principle is reviewed to show how a simple idea on the customized modeling of particle clustering in gas solid systems was developed, verified, extended and finally generalized into the common principle of compromise in competition between dominant mechanisms for all mesoscale phenomena in science and engineering leading to the proposition of meso science. More importantly, updates on the concept of meso science and perspectives are presented along with new insights and findings from after the publication of the original book. In this way we hope to help readers more easily familiarize themselves with meso science and to trigger interest and attention to this interdisciplinary field. Application areas include multiphase flow and fluid dynamics, chemical, biochemical and process engineering, mineral processing and metallurgical engineering, energy and resources, material science and engineering. Jinghai Li is vice president of Chinese Academy of Sciences CAS professor at Institute of Process Engineering of CAS. Wenlai Huang is associate professor at Institute of Process Engineering of CAS.
