## **Patterns Building Blocks Of Experience:**

**Complexity, Cognition, Urban Planning and Design** Juval Portugali, Egbert Stolk, 2016-05-19 This book which resulted from an intensive discourse between experts from several disciplines complexity theorists cognitive scientists philosophers urban planners and urban designers as well as a zoologist and a physiologist addresses various issues regarding cities It is a first step in responding to the challenge of generating just such a discourse based on a dilemma identified in the CTC Complexity Theories of Cities domain The latter has demonstrated that cities exhibit the properties of natural organic complex systems they are open complex and bottom up have fractal structures and are often chaotic CTC have further shown that many of the mathematical formalisms and models developed to study material and organic complex systems also apply to cities The dilemma in the current state of CTC is that cities differ from natural complex systems in that they are hybrid complex systems composed on the one hand of artifacts such as buildings roads and bridges and of natural human agents on the other This raises a plethora of new questions on the difference between the natural and the artificial the cognitive origin of human action and behavior and the role of planning and designing cities The answers to these questions cannot come from a single discipline they must instead emerge from a discourse between experts from several disciplines engaged in CTC

in the construction of our personal worlds In Patterns Building Blocks of Experience Marilyn Charles shows how such primary experiences coalesce into patterns those essential units of meaning that capture the unique subjectivity of each individual Frequently known by their prosody or affective melody patterns come to have profound meanings that we utilize in constructing basic notions of self and other Through pattern Charles holds we approach elusive meanings through dimensions of shape contour and affective resonance Such patterned understandings in turn become a mode of interchange through which we touch one another in ways that go beyond the overtly physical Analytic patients Charles finds have often led early lives too full of noise to use their early sensory and affective experiences constructively Such patients tend to live out patterns that operate unconsciously and have become literally incomprehensible Analytic communication by drawing explicit attention to such patterned experience provides new images that intrude on ingrained patterns of thinking about the self and other Out of the productive clash of analytically co constructed images and the invariant patterns of the past emerge new conceptions of what the patient may choose to be in the present moment Through it all Charles displays an admirable willingness to sit in difficult spaces and to work through troubling therapeutic impasses from the inside out rather than from some point of ostensible safety This finely textured and richly evocative study which grows out of Charles extensive clinical work with artists writers and musicians is a signal contribution to developmental theory clinical theory and the psychology of creativity [Psychoanalysis, Culture & Society](#) ,2008 [Design Science at the Intersection of Physical and Virtual Design](#)

heighten the intimacy of the therapist client journey and help change take place more easily in the hidden recesses of the self
