valuable data and much else are in the right place at the right time demands a subtle choreography Enter logistics Susan Zieger argues that logistics is the foundation of power in our time Blending detailed historical research with real life stories that crystallize the human and ecological consequences of supply chains Logistics and Power shows how the pursuit of efficient movement has come to organize economies while disordering societies and selves Logistics emerges as the key to consumerism and the experience of work It justifies corporate and police surveillance illuminates patterns of migration and exploitation and explains why the oceans are clotted with plastic It is in the sphere of logistics that capitalist motives are most dramatically in tension with planetary needs A headfirst encounter with the obscure forces subordinating all goals below those of capital Logistics and Power points the way to an alternative a mindful and politically attentive kind of movement compatible with human thriving

**Software, Infrastructure, Labor** Ned Rossiter,2016-06-23

Infrastructure makes worlds Software coordinates labor Logistics governs movement These pillars of contemporary capitalism correspond with the materiality of digital communication systems on a planetary scale Ned Rossiter theorizes the force of logistical media to discern how subjectivity and labor economy and society are tied to the logistical imaginary of seamless interoperability Contingency haunts logistical power Technologies of capture are prone to infrastructural breakdown sabotage and failure Strategies of evasion anonymity and disruption unsettle regimes of calculation and containment We live in a computational age where media again disappear into the background as infrastructure Software Infrastructure Labor intercuts transdisciplinary theoretical reflection with empirical encounters ranging from the Cold War legacy of cybernetics shipping ports in China and Greece the territoriality of data centers video game design and scrap metal economies in the e waste industry Rossiter argues that infrastructural ruins serve as resources for the collective design of blueprints and prototypes demanded of radical politics today
