**The Mastery Learning Handbook** Jonathan Bergmann, 2022-10-14 Mastery learning is an instructional approach that empowers every student to progress with confidence. Using flexible pacing and targeted supports, teachers guide students through a cyclic process of preparation, demonstration, and formative feedback until there is a mutual agreement between teacher and student that the student is ready to advance. In this book, educator Jonathan Bergmann, a pioneer of the flipped classroom movement, walks you step by step through the mastery learning cycle, explaining what it entails and providing the templates, models, and rubrics you need to start using it in your own classroom. You'll learn how to set meaningful, measurable, and transferable learning objectives that target essential knowledge, skills, and dispositions. Develop a mastery rubric to check for student levels of proficiency. Create an assessment plan that ensures positive learning experiences for all. Plan and deliver units that incorporate both time-shifted direct instruction and collaborative application activities within the classroom space. Provide timely differentiated support based on students' individual learning needs. Informed by trial and error in his own classroom and by discussions with other expert practitioners, Bergmann shares commonsense solutions to the major challenges of mastery learning implementation, everything from how to manage pacing to how to create multiple versions of tests, determine grades, and get stakeholder buy-in. *The Mastery Learning Handbook* is both an introduction to this exciting instructional approach and a practical resource that K-12 teachers can turn to again and again. See for yourself just how effective, enjoyable, and transformative mastery learning can be.

**Fundamentals of Environmental and Toxicological Chemistry** Stanley E. Manahan, 2013-02-25 *Fundamentals of Environmental and Toxicological Chemistry* Sustainable Science Fourth Edition covers university level environmental chemistry with toxicological chemistry integrated throughout the book. This new edition of a bestseller provides an updated text with an increased emphasis on sustainability and green chemistry. It is organized based on the five spheres of Earth's environment: 1. the hydrosphere (water), 2. the atmosphere (air), 3. the geosphere (solid Earth), 4. the biosphere (life), and 5. the anthrosphere (the part of the environment made and used by humans). The first chapter defines environmental chemistry and each of the five environmental spheres. The second chapter presents the basics of toxicological chemistry and its relationship to environmental chemistry. Subsequent chapters are grouped by sphere, beginning with the hydrosphere and its environmental chemistry (water pollution, sustainability, and water as nature's most renewable resource). Chapters then describe the atmosphere, its structure and importance for protecting life on Earth, air pollutants, and the sustainability of atmospheric quality. The author explains the nature of the geosphere and discusses soil for growing food, as well as geosphere sustainability. He also describes the biosphere and its sustainability. The final sphere described is the anthrosphere. The text explains human influence on the environment, including climate pollution in and by the anthrosphere, and means of sustaining this sphere.
