[Summary of The Master Algorithm by Pedro Domingos](#) QuickRead, Lea Schullery, How the Quest For the Ultimate Learning Machine Will Remake Our World According to Pedro Domingos one of the greatest mysteries of the universe is not how it begins or ends or what infinitesimal threads it's woven from it's what goes on in a small child's mind how a pound of gray jelly can grow into a seat of consciousness Even more astonishing is how little role parents play in teaching the brain to go through this transformation as it largely does it all on its own Today scientists computer engineers and more are working towards a machine that can do exactly what the human brain does learn With all the technology of today machines may one day even become smarter than the human brain Computers can learn from large sets of data that we may not even realize is getting collected This means that our future can be run by technology changing the way we live and interact with each other As you read you'll learn how machines will one day be like the human brain how there is no such thing as a perfect algorithm and how a Master Algorithm is on its way to being created Do you want more free book summaries like this Download our app for free at <https://www.quickread.com> App and get access to hundreds of free book and audiobook summaries DISCLAIMER This book summary is meant as a preview and not a replacement for the original work If you like this summary please consider purchasing the original book to get the full experience as the original author intended it to be If you are the original author of any book on QuickRead and want us to remove it please contact us at [hello.quickread.com](mailto:hello.quickread.com)

[and the Future of Defense](#) Stephan De Spiegeleire, Matthijs Maas, Tim Sweijts, 2017-05-17 Artificial intelligence AI is on everybody's minds these days Most of the world's leading companies are making massive investments in it Governments are scrambling to catch up Every single one of us who uses Google Search or any of the new digital assistants on our

smartphones has witnessed first hand how quickly these developments now go. Many analysts foresee truly disruptive changes in education, employment, health, knowledge generation, mobility, etc. But what will AI mean for defense and security? In a new study HCSS offers a unique perspective on this question. Most studies to date quickly jump from AI to autonomous mostly weapon systems. They anticipate future armed forces that mostly resemble today's armed forces engaging in fairly similar types of activities with a still primarily industrial kinetic capability bundle that would increasingly be AI augmented. The authors of this study argue that AI may have a far more transformational impact on defense and security whereby new incarnations of armed force start doing different things in novel ways. The report sketches a much broader option space within which defense and security organizations DSOs may wish to invest in successive generations of AI technologies. It suggests that some of the most promising investment opportunities to start generating the sustainable security effects that our polities, societies, and economies expect may lie in the realms of prevention and resilience. Also in those areas any large scale application of AI will have to result from a preliminary open minded on all sides public debate on its legal, ethical, and privacy implications. The authors submit however that such a debate would be more fruitful than the current heated discussions about killer drones or robots. Finally the study suggests that the advent of artificial super intelligence i.e. AI that is superior across the board to human intelligence which many experts now put firmly within the longer term planning horizons of our DSOs presents us with unprecedented risks but also opportunities that we have to start to explore. The report contains an overview of the role that intelligence the computational part of the ability to achieve goals in the world has played in defense and security throughout human history a primer on AI what it is where it comes from and where it stands today in both civilian and military contexts a discussion of the broad option space for DSOs it opens up 12 illustrative use cases across that option space and a set of recommendations for especially small and medium sized defense and security organizations. *Mapping the Posthuman* Grant Hamilton, Carolyn Lau, 2023-12-22 This book works to delineate some of the major routes by which science and art intersect. Structured according to the origin myths of the posthuman that continue to shape the idea of the human in our technological modernity this volume gives space to narratives of alter modernity that resonate with Ursula K Le Guin's call for a new kind of story which exposes the violence and exploitation driven by a sustained belief in human exceptionalism, anthropocentrism and cultural superiority. In this context the posthuman myths of multispecies flourishing given in this collection which are situated across a range of historical times and locations and media and modalities are to be thought of as kernels of possible futures that can only be realized through collective endeavour.
