

**NOTE:**

If a torque wrench is not available when you are installing a spark plug, a good estimate of the correct torque is 1/4 to 1/2 turns past finger tight. Have the spark plug torqued to the correct value as soon as possible with a torque wrench.

**AIR FILTER CLEANING**

1. Remove the seat and the element cover.
2. Wash the element gently, but thoroughly, in solvent.
3. Squeeze the excess solvent out of the element and let dry.
4. Pour a small quantity of foam-air-filter oil or air cooled 2-cycle engine oil onto the filter element and work thoroughly into the porous foam material.

**NOTE:**

In order to function properly, the element must be damp with oil at all times, but not dripping with oil.

5. Reinstall the element assembly and the parts removed for access.

**NOTE:**

Each time filter element maintenance is performed, check the air inlet to the filter case for obstructions. Check the air cleaner joint rubber to the carburetor and manifold fittings for an air-tight seal. Tighten all fittings thoroughly to avoid the possibility of unfiltered air entering the engine.
