Peer To Peer Computing Principles And Applications:

    <u>Peer-to-Peer Computing</u> Quang Hieu Vu,Mihai Lupu,Beng Chin Ooi,2009-10-20 Peer to peer P2P technology or peer computing is a paradigm that is viewed as a potential technology for redesigning distributed architectures and consequently distributed processing Yet the scale and dynamism that characterize P2P systems demand that we reexamine traditional distributed technologies A paradigm shift that includes self reorganization adaptation and resilience is called for On the other hand the increased computational power of such networks opens up completely new applications such as in digital content sharing scientific computation gaming or collaborative work environments In this book Vu Lupu and Ooi present the technical challenges offered by P2P systems and the means that have been proposed to address them They provide a thorough and comprehensive review of recent advances on routing and discovery methods load balancing and replication techniques security accountability and anonymity as well as trust and reputation schemes programming models and P2P systems and projects Besides surveying existing methods and systems they also compare and evaluate some of the more promising schemes The need for such a book is evident It provides a single source for practitioners researchers and students on the state of the art For practitioners this book explains best practice guiding selection of appropriate techniques for each application For researchers this book provides a foundation for the development of new and more effective methods For students it is an overview of the wide range of advanced techniques for realizing effective P2P systems and it can easily be used as a text for an advanced course on Peer to Peer Computing and Technologies or as a companion text for courses on various subjects such as distributed systems and grid and cluster computing *Structured Peer-to-Peer Systems* Dmitry Korzun,Andrei Gurtov,2012-11-12 The field of structured P2P systems has seen fast growth upon the introduction of Distributed Hash Tables DHTs in the early 2000s The first proposals including Chord Pastry Tapestry were gradually improved to cope with scalability locality and security issues By utilizing the processing and bandwidth resources of end users the P2P approach enables high performance of data distribution which is hard to achieve with traditional client server architectures The P2P computing community is also being actively utilized for software updates to the Internet P2PSIP VoIP video on demand and distributed backups The recent introduction of the identifier locator split proposal for future Internet architectures poses another important application for DHTs namely mapping between host permanent identity and changing IP address The growing complexity and scale of modern P2P systems requires the introduction of hierarchy and intelligence in routing of requests Structured Peer to Peer Systems covers fundamental issues in organization optimization and tradeoffs of present large scale structured P2P systems as well as provides principles analytical models and simulation methods applicable in designing future systems Part I presents the state of the art of structured P2P systems popular DHT topologies and protocols and the design challenges for efficient P2P network topology organization routing scalability and security Part II shows that local strategies with limited knowledge per peer provide the highest scalability level subject to reasonable

performance and security constraints Although the strategies are local their efficiency is due to elements of hierarchical organization which appear in many DHT designs that traditionally are considered as flat ones Part III describes methods to gradually enhance the local view limit when a peer is capable to operate with larger knowledge still partial about the entire system These methods were formed in the evolution of hierarchical organization from flat DHT networks to hierarchical DHT architectures look ahead routing and topology aware ranking Part IV highlights some known P2P based experimental systems and commercial applications in the modern Internet The discussion clarifies the importance of P2P technology for building present and future Internet systems   **Networks for Pervasive Services** Antonio Liotta,George Exarchakos,2011-05-12 Readers will progress from an understanding of what the Internet is now towards an understanding of the motivations and techniques that will drive its future   Next Generation Content Delivery Infrastructures: Emerging Paradigms and Technologies Fortino, Giancarlo,Palau, Carlos E.,2012-06-30 This book delivers state of the art research on current and future Internet based content delivery networking topics bringing to the forefront novel problems that demand investigation   *Principles and Applications of Distributed Event-based Systems* Annika Hinze,Alejandro P. Buchmann,2010 This book showcases event based systems in real world applications providing professionals researchers and students in systems design with a rich compendium of latest applications in the field Provided by publisher   Blockchain Platforms Stijn Van Hijfte,2022-06-01 This book introduces all the technical features that make up blockchain technology today It starts with a thorough explanation of all technological concepts necessary to understand any discussions related to distributed ledgers and a short history of earlier implementations It then discusses in detail how the Bitcoin network looks and what changes are coming in the near future together with a range of altcoins that were created on the same base code To get an even better idea the book shortly explores how Bitcoin might be forked before going into detail on the Ethereum network and cryptocurrencies running on top of the network smart contracts and more The book introduces the Hyperledger foundation and the tools offered to create private blockchain solutions For those willing it investigates directed acyclic graphs DAGs and several of its implementations which could solve several of the problems other blockchain networks are still dealing with to this day In Chapter 4 readers can find an overview of blockchain networks that can be used to build solutions of their own and the tools that can help them in the process   **Internet and the Law** Aaron Schwabach,2014-01-15 The world of Internet law is constantly changing and is difficult to follow even for those for whom doing so is a full time job This updated everything you need to know reference removes the uncertainty Internet and the Law Technology Society and Compromises Second Edition is the go to source for anyone who needs clear explanations of complex legal concepts related to online practices and content This wide ranging alphabetical reference explores diverse areas of law including territorial jurisdiction and taxation that are relevant to or affected by advances in information technology and the rise of the Internet Particular emphasis is placed on intellectual property law and laws regarding freedom of expression The Internet as this book shows
