Active Learning: Theoretical Perspectives, Empirical Studies and Design Profiles Robert Cassidy, Elizabeth S. Charles, James D. Slotta, Nathaniel Lasry, 2019-07-11 This book represents the emerging efforts of a growing international network of researchers and practitioners to promote the development and uptake of evidence based pedagogies in higher education at something a level approaching large scale impact By offering a communication venue that attracts and enhances much needed partnerships among practitioners and researchers in pedagogical innovation we aim to change the conversation and focus on how we work and learn together i e extending the implementation and knowledge of co design methods In this first edition of our Research Topic on Active Learning we highlight two of the three types of publications we wish to promote First are studies aimed at understanding the pedagogical designs developed by practitioners in their own practices by bringing to bear the theoretical lenses developed and tested in the education research community These types of studies constitute the practice pull that we see as a necessary counterbalance to knowledge push in a more productive pedagogical innovation ecosystem based on research practitioner partnerships Second are studies empirically examining the implementations of evidence based designs in naturalistic settings and under naturalistic conditions Interestingly the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as in between straddling the two worlds As a result these publications represent both the rigours of research and the pragmatism of reflective practice In forthcoming editions we will add to this collection a third type of publication design profiles These will present practitioner developed pedagogical designs at varying levels of abstraction to be held to scrutiny amongst practitioners instructional designers and researchers alike We hope by bringing these types of studies together in an open access format that we may contribute to the development of new forms of practitioner researcher interactions that promote co design in pedagogical innovation

Transforming Undergraduate Education in Science, Mathematics, Engineering, and Technology National Research Council, Division of Behavioral and Social Sciences and Education, Board on Science Education, Committee on Undergraduate Science Education, 1999-04-25 Today s undergraduate students future leaders policymakers teachers and citizens as well as scientists and engineers will need to make important decisions based on their understanding of scientific and technological concepts However many undergraduates in the United States do not study science mathematics engineering or technology

SME T for more than one year if at all. Additionally, many of the SME T courses that students take are focused on one discipline and often do not give students an understanding about how disciplines are interconnected or relevant to students' lives and society. To address these issues, the National Research Council convened a series of symposia and forums of representatives from SME T educational and industrial communities. Those discussions contributed to this book, which provides six vision statements and recommendations for how to improve SME T education for all undergraduates. The book addresses pre-college preparation for students in SME T and the joint roles and responsibilities of faculty and administrators in arts and sciences and in schools of education to better educate teachers of K-12 mathematics, science, and technology. It suggests how colleges can improve and evaluate lower-division undergraduate courses for all students, strengthen institutional infrastructures to encourage quality teaching, and better prepare graduate students who will become future SME T faculty.

Experiential Education in the College Context Jay W. Roberts, 2015-09-16. *Experiential Education in the College Context* provides college and university faculty with pedagogical approaches that engage students and support high-impact learning. Organized around four essential categories: active learning, integrated learning, project-based learning, and community-based learning, this resource offers examples from across disciplines to illustrate principles and best practices for designing and implementing experiential curriculum in the college and university setting. Framed by theory, this book provides practical guidance on a range of experiential teaching and learning approaches, including internships, civic engagement, project-based research, service learning, game-based learning, and inquiry learning. At a time when rising tuition, consumer-driven models, and e-learning have challenged the idea of traditional liberal education, this book provides a compelling discussion of the purposes of higher education and the role experiential education plays in sustaining and broadening notions of democratic citizenship.

Written by one of the leaders of the Physics Education Research (PER) movement, *Teaching Physics* is a book for anyone interested in learning how to become a more effective physics teacher. Rather than reviewing specific topics in physics with hints for how to teach them and lists of common student difficulties, *Teaching Physics* presents a variety of tools for improving both the teaching and learning of physics, from new kinds of homework and exam problems to surveys for figuring out what has happened in your class to tools for taking and analyzing data using computers and video. *Teaching Physics* is a companion guide to using the Physics Suite, an integrated collection of research-based instructional materials for lecture, laboratory, recitation, and workshop/studio environments. But even if you don't use a single element from the Suite, *Teaching Physics* can help you enhance your students' learning experience.
