

Microeconomics Chapter 8

The costs of taxation

Tax on a good levied on buyers

- Demand curve shifts downward by the size of tax

Tax on a good levied on sellers

- Supply curve shifts upward by the size of tax

Tax on a good levied on buyers or on sellers

- Same outcome: a price wedge
- Price paid by buyer rises
- Price received by sellers falls
- Lower quantity sold

Tax burden

- Distributed between producers and consumers
- Determined by elasticities of supply and demand

Economic Welfare

- Buyers: consumer surplus
- Sellers: producer surplus
- Government: total tax revenue (tax times quantity sold), public benefit from the tax

Welfare without a tax

- Consumer surplus, A, B, and C
- Producer surplus, D, E, and F
- Total tax revenue = 0

Welfare with tax

- Smaller consumer surplus, A
- Smaller producer surplus, F
- Total tax revenue, B and D
- Smaller overall welfare

Losses of a surplus to buyers and sellers from a tax exceed the revenue raised by the government

Deadweight loss fall in total surplus that results from a market distortion, such as a tax

Taxes distort incentives

- Markets allocate resources inefficiently

Taxes cause deadweight losses

- Prevents buyers and sellers from realizing some of the gains from trade

The gains from trade

- Difference between buyers value and sellers cost are less than the tax
- Once the tax is imposed some trades are not made: deadweight loss

Price elasticities of supply and demand

- More elastic supply curve, larger the deadweight loss
- More elastic demand curve, larger the deadweight loss
- The greater the elasticities of supply and demand, the greater the deadweight loss of a tax

Roberto Serrano, Allan M. Feldman, 2012-11-30 This is a textbook for an intermediate level course in microeconomics that uses calculus throughout Most of the competition either uses no calculus or relegates the math to footnotes and appendices The text also focuses on theory rather than empirical data To motivate the analysis the authors include references to real events and firms with no distracting separate boxes **Microeconomic Laws**

Alexander Rosenberg, 2010-11-23 Rosenberg applies current thinking in philosophy of science to neoclassical economics in order to assess its claims to scientific standing Although philosophers have used history and psychology as paradigms for the examination of social science there is good reason to believe that economics is a more appropriate subject for analysis it is the most systematized and quantified of the social sciences its practitioners have reached a measure of consensus on important aspects of their subject and it encompasses a large number of apparently law like propositions
