oneAPI is a unified programming model and software development kit SDK from Intel that empowers software developers to generate high performance applications that can run on different devices comprising CPUs GPUs FPGAs and other accelerators. It lets developers write code once and deploy it on multiple architectures decreasing the complexity as well as the cost and time of software development. One of the significant strengths of oneAPI is in its capability to support an eclectic range of devices and architectures including artificial intelligence high performance computing and data analytics. Along with libraries tools and compilers oneAPI makes it cool for developers to create optimized code for an extensive variety of applications making it an indispensable tool for any developer who wants to create high performance software and reap the benefit of the latest hardware technologies. The versatility of oneAPI by means of appropriate theory and practical implementation with the latest tools in machine learning has been presented in a simple yet effective way in this book that caters to everyone's needs. Come on let's unleash the true power of our code across varied architectures.
