## Intermittent Fasting Vs:

**The Ultimate Guide to Accelerate Weight Loss, Reset Your Metabolism, Increase Your Energy, and Detox Your Body** Willie Gooding, 2021-03-19 Gaining weight as we age is a given. Whether it's from lack of exercise, hormone shifts or illness our metabolism slows and it becomes more difficult to keep weight off. Intermittent fasting is one way we can bypass this problem by giving ourselves mini breaks from digestion which is the most energy intensive activity in our bodies. These breaks help the body use up its stores of fat for fuel instead of relying on food consumption to power us through the day. In my book *Intermittent Fasting for Women over 50* I discuss how fasting for women over 50 can be a solution to the issues with weight loss and health. I discuss all the benefits of fasting for women over 50 including reduced risk of disease, improved metabolism so we burn more fat, increased energy levels which make it easier to work out and eat healthier, reduced cortisol levels which improves sleep quality and makes you feel more alert during the day. By reading this book you will master:

1. How to boost your metabolism by using Intermittent Fasting for Women Over 50
2. How to burn fat without exercise
3. How to feel energized and lose weight at the same time

**Visceral and Ectopic Fat** Hilda J. Lamb, 2022-10-15 While the health consequences and mechanisms by which visceral fat causes disease are well studied, relatively less is known about ectopic fat, its patterns of deposition and its effects on the pathophysiology of type 2 diabetes, atherosclerosis and cardiovascular disease. *Visceral and Ectopic Fat Risk Factors for Type 2 Diabetes, Atherosclerosis and Cardiovascular Disease* covers the wealth of literature that has been amassed over the past decade on this topic. This reference brings all the research and clinical data together in one volume and helps clinicians and academic researchers understand more thoroughly the underlying mechanisms and interrelation between fat depots and ectopic fat stores in relation to health and disease. It showcases some of the recent developments in adipose tissue biology, particularly on the impact of interventional strategies, bariatric surgery, liposuction, physical and dietary intervention, of which information is desired among health specialists and policy makers. Brings together up to date research on imaging, genetics and risk factors for chronic diseases such as diabetes, heart disease, cancer and fatty liver disease. Takes a deep dive into the current state of knowledge regarding fat stores, ectopic fat regulation, of fat stores, clinical implications, interventions and imaging techniques. Provides up to date information specifically focused on visceral and ectopic fat. In addition, both pathophysiological and preventive and treatment aspects of the problem will be considered. Covers a broad range of organs and different fat stores such as skeletal muscle, bone marrow, liver and kidney. Discusses potential interventions to reduce abdominal fat.
