**Ethics for European Psychologists** Geoff Lindsay, Haldor Øvreeide, Casper Koene, 2024-08-12 The understanding of and adherence to professional ethics is fundamental in navigating the moral encounters and dilemmas that all psychologists face in their daily work whether in research or professional practice. Core values and principles remain stable. However, as more complex and conflicting societal contexts come into play, the individual psychologist and the professional community need support in upholding a solid moral integrity. The volume is a welcome resource for any psychologist or student wanting to foresee, prevent, and professionally manage in an ethically responsible way the moral challenges that arise. The framework for this timely second edition remains the Meta code of Ethics of the European Federation of Psychologists Associations (EFPA), which is an important asset in addressing the challenges faced by the profession now and in the coming years. The discussions of the principles on the meta code are further developed and the authors have extended the number and types of practical examples to vividly illustrate ethical challenges and dilemmas faced. Read, discuss, and evaluate your practice.

[Reforming Occupational Licensing in the US](#) Clifford Winston, 2024-12-28 Nearly one third of US workers must obtain a license from a government agency to perform their jobs legally. This impacts employees across all areas, including lawyers, doctors, and accountants, as well as florists, hairdressers, physical therapists, and plumbers. The justification for occupational licensing is that potential consumers allegedly lack the information and knowledge to judge the competence of a service provider. This necessitates a licensing system built to ensure that customers are served by people who have received adequate training and certification in their profession. While there are recognizable benefits of occupational licensing, the training and certification requirements create barriers to entry for employees or those entering the profession. These barriers can limit competition, raise service costs, and restrict consumer access to essential services. Recent empirical work suggests that consumers have incurred these costs without being adequately protected from incompetent or unscrupulous service providers. This book addresses this situation head on. In light of occupational licensing's shortcomings, the authors of this book propose and analyze constructive reforms, assessing their effects on key professions such as law, medicine, and finance. Chapters identify the significant costs of current policies and they recommend practical reforms that rely more on market forces. The resulting book provides new ways to reduce licensing costs without compromising service quality.

[A Giant Leap](#) Robert Wachter, 2026-02-03 Evenhanded and insightful. Publisher's Weekly starred review. An accessible, often fascinating primer. Essential, illuminating reading. Kirkus. From the author of the New York Times bestseller

The Digital Doctor comes an engaging clear eyed and ultimately hopeful examination of healthcare's efforts to embrace generative artificial intelligence. In *A Giant Leap* physician and thought leader Robert Wachter navigates between hype and skepticism to make a compelling case for AI's power to transform healthcare. He argues that in a system buckling under the weight of bureaucratic pressures, soaring costs, and clinician burnout, AI doesn't need to be perfect; it only needs to be better. Drawing on extensive research and more than 100 interviews with pioneers across medicine, technology, policy, and business, Wachter shows how AI is already entering hospitals and clinics to draft notes, field patient questions, recommend treatments, interpret images, and guide surgeries. He unflinchingly confronts risks like hallucinations, biases, and misinformation while revealing how AI can now match and sometimes surpass physicians in areas ranging from diagnosis to empathy. But this isn't simply a technology story. It's about the human choices that will determine whether AI becomes healthcare's salvation or another source of harm and frustration. Blending clinical insight, vivid storytelling, and journalistic precision, *A Giant Leap* offers an indispensable roadmap for healthcare leaders, clinicians, and patients. It is a vibrant and timely account of how AI is changing what it means to care and be cared for in this age of astonishing technology.

**THE INTELLIGENCE OF MACHINES** Patrick K. Kalifungwa, 2024-11-13

In a 1951 lecture, Alan Turing argued: "It seems probable that once the machine thinking method had started, it would not take long to outstrip our feeble powers. There would be no question of the machines dying, and they would be able to converse with each other to sharpen their wits. At some stage, therefore, we should have to expect the machines to take control in the way that is mentioned in Samuel Butler's *Erewhon*. Also in a lecture broadcast on the BBC, Alan Turing expressed the opinion: 'If a machine can think, it might think more intelligently than we do, and then where should we be? Even if we could keep the machines in a subservient position for instance by turning off the power at strategic moments, we should as a species feel greatly humbled.' This new danger is certainly something which can give us anxiety, as interpreted by Seth Baum. Hubert Dreyfus writes: 'In general, by accepting the fundamental assumptions that the nervous system is part of the physical world and that all physical processes can be described in a mathematical formalism which can in turn be manipulated by a digital computer, one can arrive at the strong claim that the behavior which results from human information processing, whether directly formalizable or not, can always be indirectly reproduced on a digital machine.' Dreyfus, 1972. John Searle writes: 'Could a man-made machine think? Assuming it possible to produce artificially a machine with a nervous system, the answer to the question seems to be obviously yes. Could a digital computer think? If by "digital computer" you mean anything at all that has a level of description where it can be correctly described as the instantiation of a computer program, then again the answer is of course yes, since we are the instantiations of any number of computer programs and we can think.' Searle, 1980.
